Orange Cyberdefense inaugurates its new headquarters at La Défense

- Employees from six locations around Greater Paris brought together to enable closer collaboration.
- A stimulating and attractive work environment, based on exchanges and sharing.

Orange has set up its new headquarters for Orange Cyberdefense, the Group's entity dedicated to corporate cyber-security, at La Défense, Europe's largest business district, in the Paris area. This new 6,800m² campus, spread over 12 levels, is home to almost 500 employees since early September.

In the presence of Mounir Mahjoubi, Minister of State for the digital sector attached to the Prime Minister, Patrick Devedjian, President of the Hauts-de-Seine Departmental Council, Guillaume Poupard, Director General of ANSSI, and Thierry Delville, Ministerial Delegate for Security Industries and the Fight against Cyberthreats, the inauguration of the new campus was an opportunity to take stock of Orange Cyberdefense's expertise and ambitions and to meet the teams.

With an increasing number of targeted threats, security has become a major issue for all departments within the company. Confident that cybersecurity is one of the main drivers of growth, Orange has chosen to develop a global and proactive approach to security through its entity Orange Cyberdefense.

This new campus will help companies to develop their "immune system" against digital threats and combines the best expertise in anticipating and handling cybersecurity threats.

"The Orange Group has made cybersecurity a strategic priority within its Essentials2020 plan. In just two years, Orange Cyberdefense has become France's leading player in cybersecurity and our aim now is to become a leader in Europe," says Stéphane Richard, Chairman and CEO of Orange.

"The Campus brings together our experts in a single facility to promote collaboration and sharing. It is also ready to welcome future recruits. We were keen to involve the teams during the development of this new working environment that is conducive to their well-being while at the same time complying with cybersecurity requirements," explains Michel Van Den Berghe, CEO of Orange Cyberdefense.

Spaces designed to satisfy cybersecurity requirements

Certified HQE (High Environmental Quality), this 6,800m²-building can accommodate up to 600 employees on 12 levels. It meets the working space requirements specific to cybersecurity - crisis room, Computer Emergency Response Team* (CERT) and the Cyber Security Operation Center** (CyberSOC), an epidemiology laboratory, sealed and non-shared rooms, and two training rooms. It combines the hyper-technology necessary for protecting sensitive data and the teams' desire to interact and work together.

Spaces created jointly with the employees to foster well-being and collaboration

Orange Cyberdefense worked with its employees to co-create the new spaces. They chose their space, their atmospheres and their furniture for each floor. They have 22 confidential workspaces, 11 meeting rooms, 33 meeting cubicles, 30 telephone spaces; all with furniture that “feels like home”. The choice to share desks was made within the teams. The aim is to foster well-being and friendliness to better work, build and create together.

A vast social area is available with table football, an arcade machine, a video game console and board games to promote exchanges between colleagues and a zen area to relax and have a rest.

A booming sector

Cyberthreats now come in many forms and cybersecurity jobs have never been more desirable, but companies suffer from a lack of properly trained applicants. This is why Orange Cyberdefense has committed itself to operating a constructive and innovative training approach in order to recruit cybersecurity experts. This is why the entity opened a new Security Centre earlier in 2017 in the north of France and announced the creation of the Orange Cyberdefense Academy at a national level to train future talents. Orange aims to recruit 1,000 cybersecurity specialists by 2020.

With thirty years of experience in securing sensitive infrastructure for major French multinational companies, the 1,200 employees of Orange Cyberdefense offer their skills to companies of all sizes and across all sectors in France, Europe and worldwide.

* Cyber attack alert and reaction centers.

** Operational security centers.

About Orange

Orange is one of the world’s leading telecommunications operators with sales of 40.9 billion euros in 2016 and 153,000 employees worldwide at 30 June 2017, including 94,000 employees in France. Present in 29 countries, the Group has a total customer base of 269 million customers worldwide at 30 June 2017, including 207 million mobile customers and 19 million fixed broadband customers. Orange is also a leading provider of global IT and telecommunication services to multinational companies, under the brand Orange Business Services. In March 2015, the Group presented its new strategic plan “Essentials2020” which places customer experience at the heart of its strategy with the aim of allowing them to benefit fully from the digital universe and the power of its new generation networks.

Orange is listed on Euronext Paris (symbol ORA) and on the New York Stock Exchange (symbol ORAN).
