Lync 2013

Skype for Business 2015

Skype Online - Cloud Connector Edition

10 october 2019

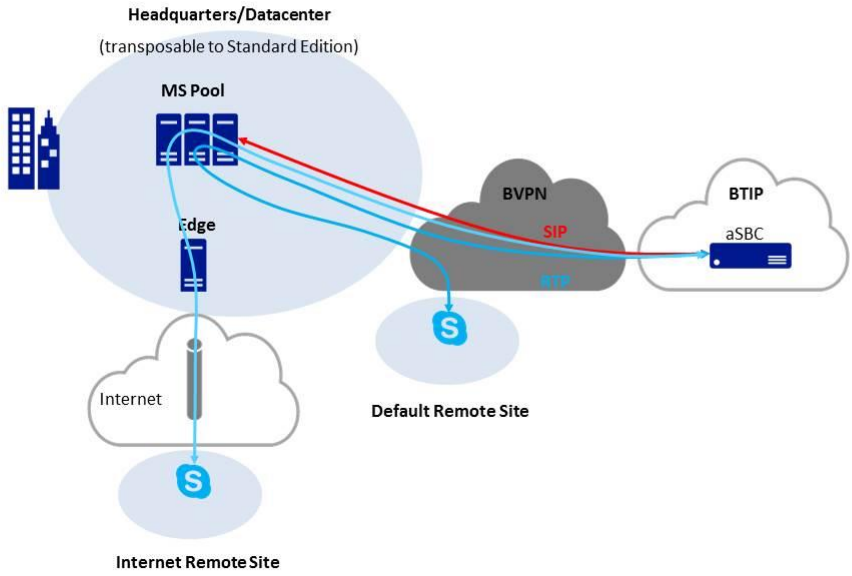
Lync 2013/AudioCodes/Ribbon Checklist 1.6
Skype for Business 2015/AudioCodes/Ribbon Checklist 1.13
AudioCodes FAX checklist 1.0
Cloud Connector Edition AudioCodes Checklist 2.0

Contents

1 Main certified architectures

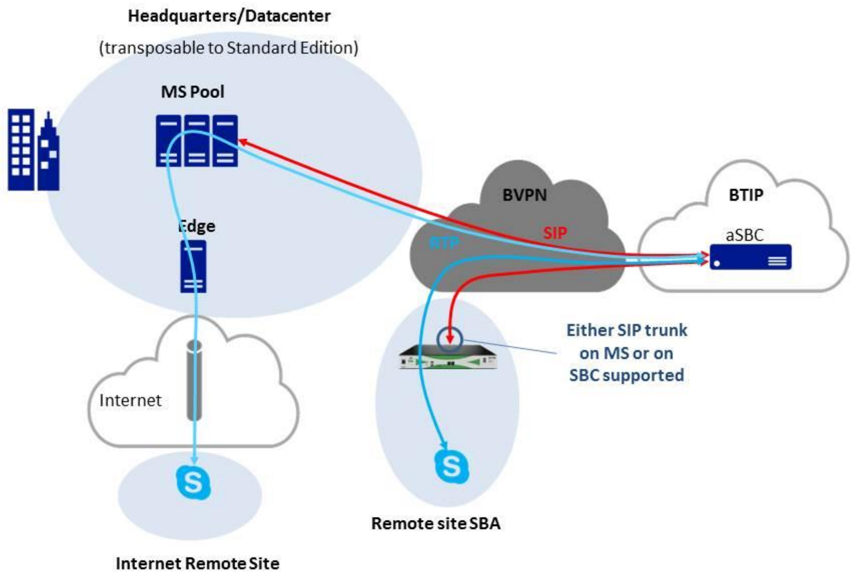
1.1 Lync 2013 & Skype for Business 2015 on premises

1.1.1 Centralized architecture

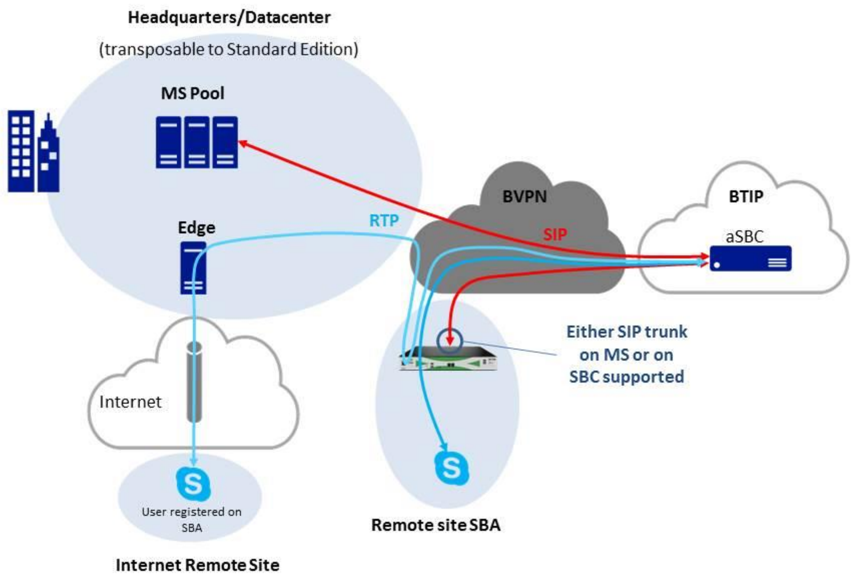


1.1.2 Remote site "SBA"

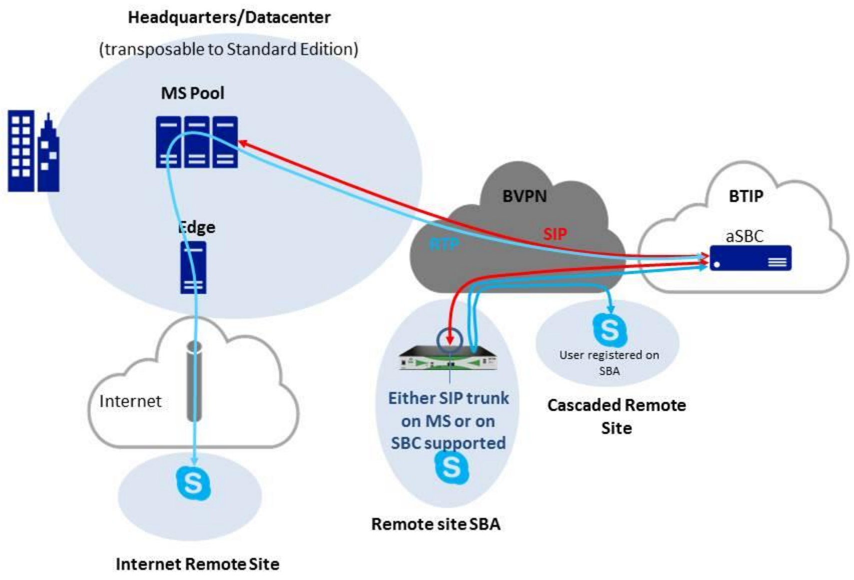
Example 1



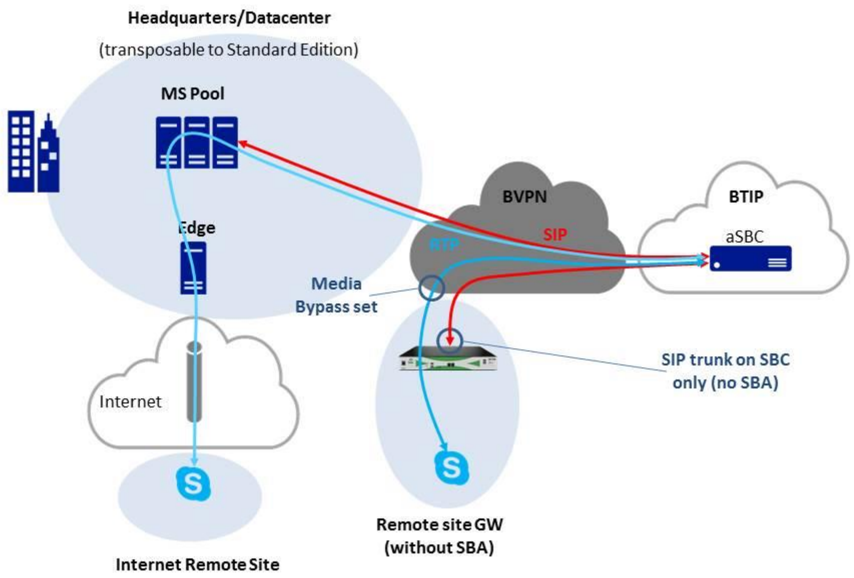
Example 2



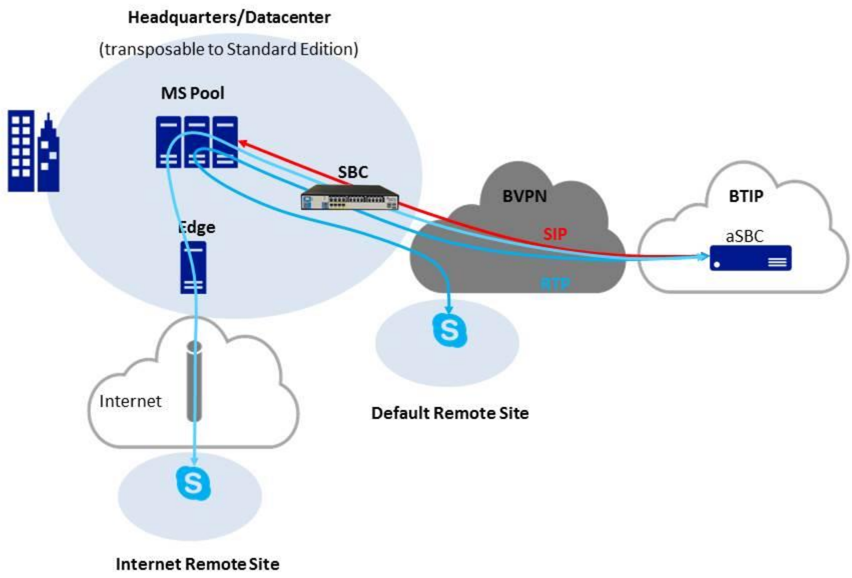
1.1.3 "Cascaded" remote site



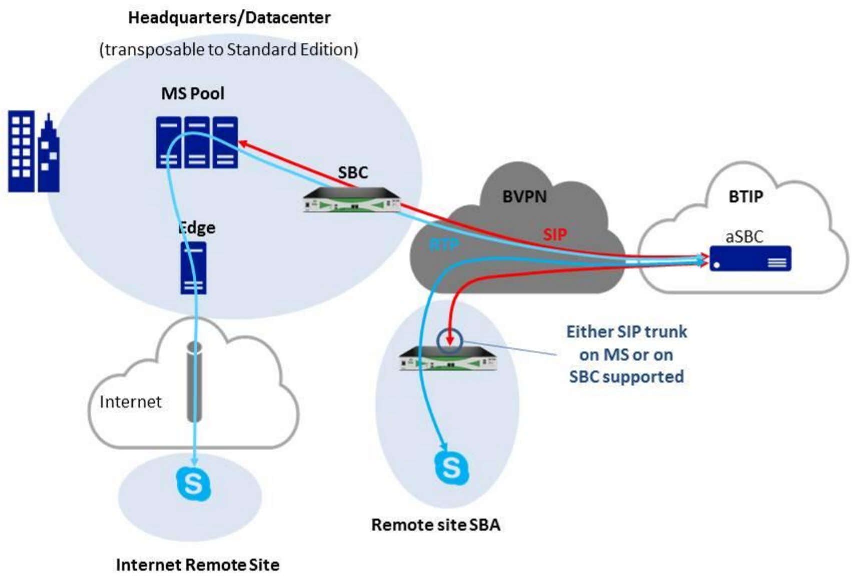
1.1.4 Remote site "GW"



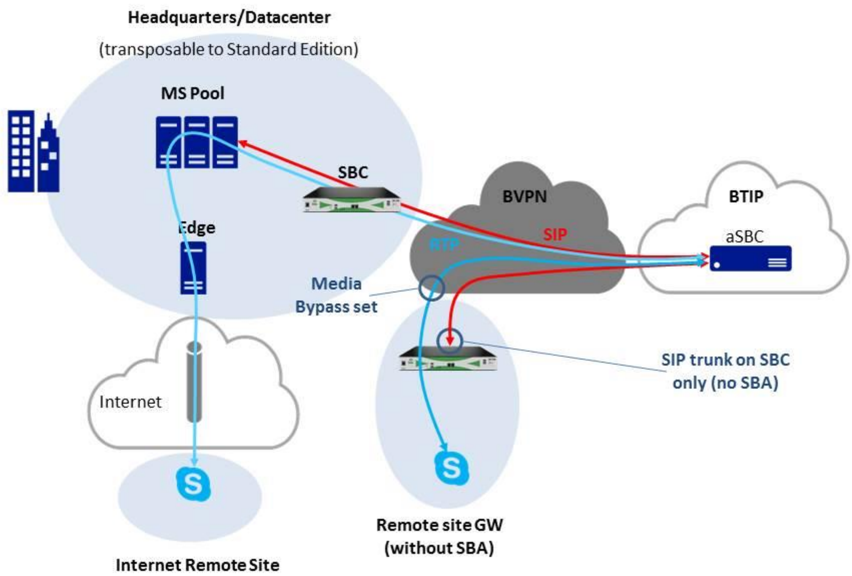
1.1.5 Centralized architecture with central SBC



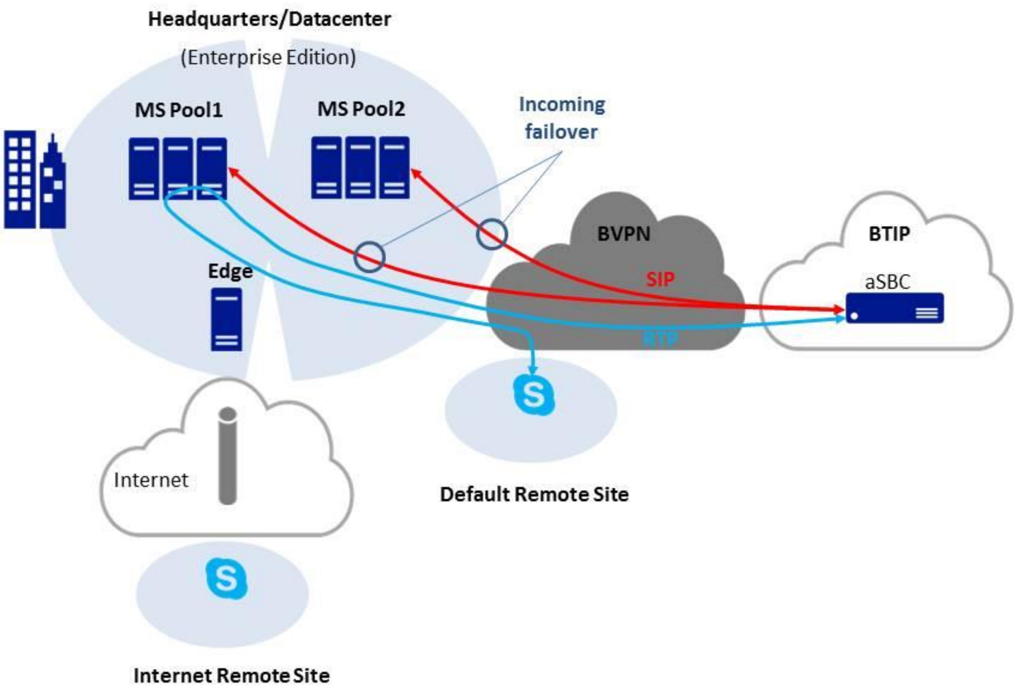
1.1.6 Remote site “SBA” and central site with central SBC



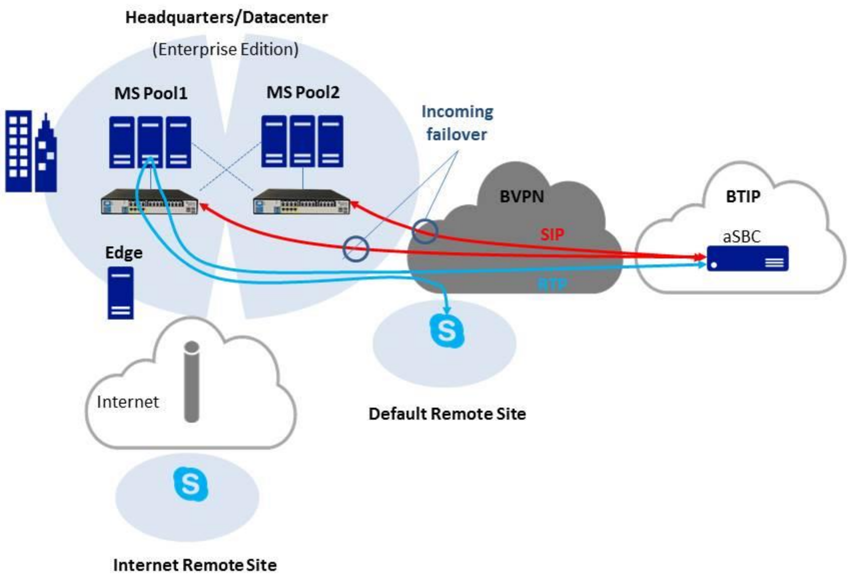
1.1.7 Remote site “GW” and central site with central SBC



1.1.8 2-pool centralized architecture



1.1.9 2-pool architecture with central SBC (Customer specific)

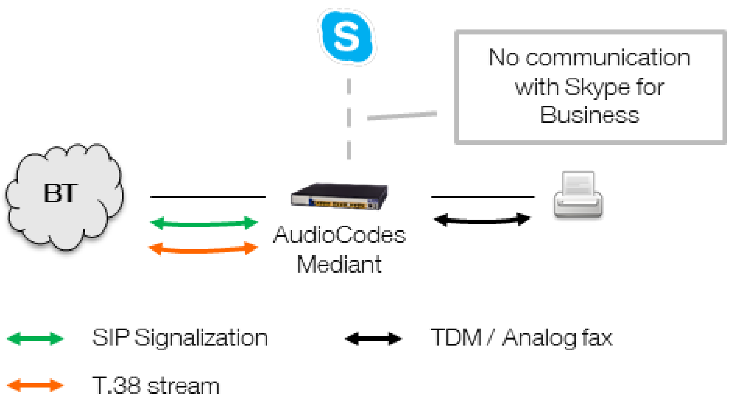


1.1.10 FAX

FAX on AudioCodes GW with or without Media Pack GW is certified both on French (BTIP) and International (BTalk) scopes. Configuration checklist is not available yet but a configuration guide is available (not in this document). FAX protocol is T.38.

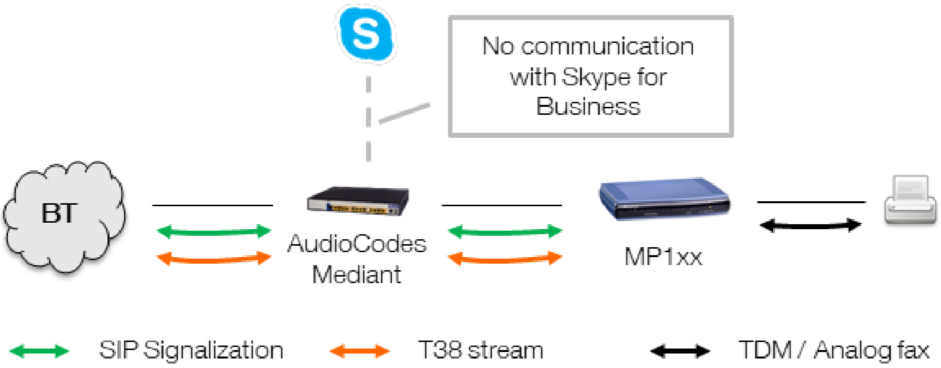
Fax calls to and from Business Talk consumes the same SIP Trunk which is used for regular voice call. Standard calls are always sent through Skype for Business to apply routing rules. When call is made from fax or to fax Mediant applies direct routing with Business Talk bypassing Skype for Business.

1.1.10.1 FAX directly connected on AudioCodes Mediant



The analog fax device can be connected directly to AudioCodes Mediant gateway to FXS ports. Call is routed directly between Business Talk / Business Talk IP and fax without Skype for Business involvement.

1.1.10.2 FAX connected to a MP1xx cascaded behind AudioCodes Mediant



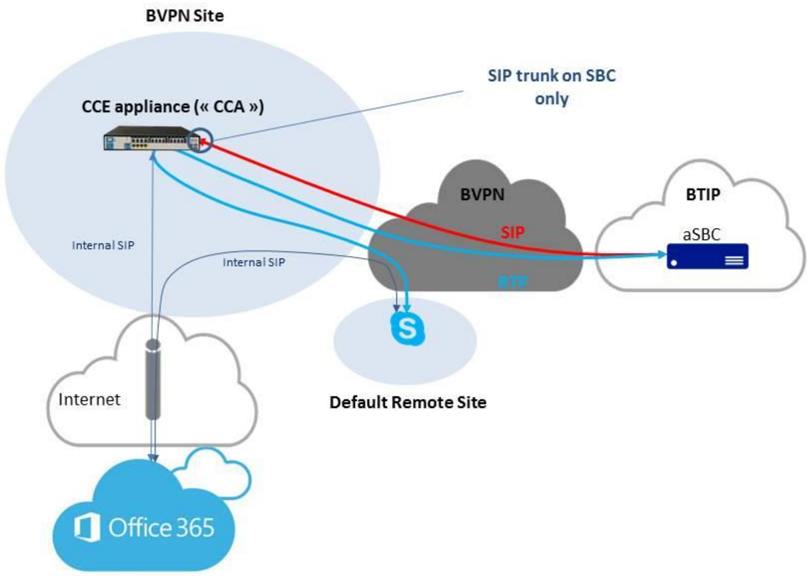
In this architecture fax device is connected to AudioCodes MediaPack 1xx analog telephony adapter. MediaPack is integrated with Mediant which can be placed in other remote site or in datacenter. Mediant gateway with no directly connected endpoints can be virtualized.

Same as in previous architecture call is routed directly between Business Talk / Business Talk IP and fax without Skype for Business involvement.

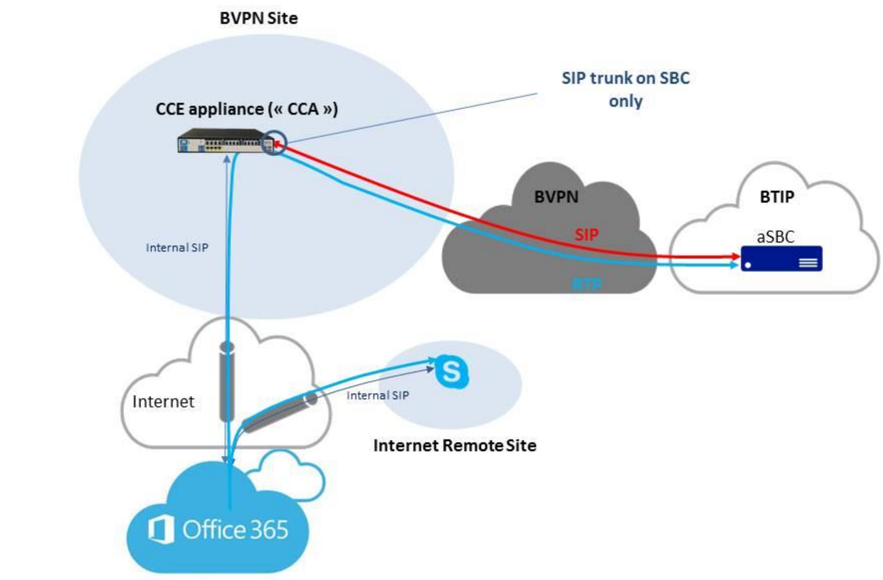
1.2 Skype for Business Online

1.2.1 Standalone mode

Example 1 – offnet call from a BVPN remote site

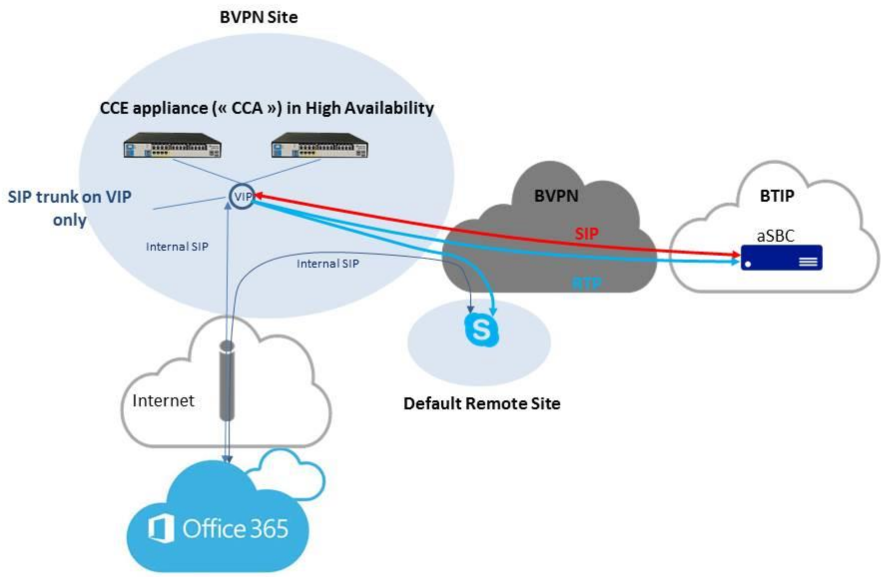


Example 2 – offnet call from an Internet remote site



1.2.2 Redundant architectures

Example: high-availability



Round-Robin & Nominal/Backup also certified

2 Parameters for connection to BTIP

2.1 On-premise architectures

Head Quarter (HQ) architecture	Level of Service	@IP used by the service	
Standard Edition Enterprise Edition	No redundancy	MS IP@	
Standard Edition pairing 100% users on nominal	Local Server redundancy with database replication 2 Mediation Servers (MS1, MS2)	MS1 IP@	MS2 IP@
2x Standard Edition Pairing 50% users registered on nominal of each pair	Offers the same Level Of Service as 1xSE Pairing, but increases the capacity 2 Mediation Servers (MS) per pair. Round robin between pairs from incoming calls, even in case of loss of one SE Pair1 : MS1+MS2 Pair2 : MS3+MS4	MS1 IP@ MS3 IP@	MS2 IP@ MS4 IP@
Enterprise Edition	Load balancing (one pool) Single pool of Y Mediation Servers (MS) on the same site (Y>1)	MS1 IP@ … MSY IP@	
Enterprise Edition	- Local pool redundancy: - 2 Pools of Y and Y' Mediation Servers (MS) on the same site (Y>=1, Y'>=1) OR - Geographical pool redundancy (same region) - 2 Pools of Y and Y' Mediation Servers (MS), each Pool hosted by different sites (Y>=1, Y'>=1)	Pool1_MS1 IP@ … Pool1_MSY IP@	Pool2_MS1 IP@ … Pool2_MSY' IP@
Central trunk with central SBC	No redundancy SBC without SBA on HQ acting as a customer SBC for HQ SIP trunk only	SBC IP@	

Remote Site (RS) architecture	Level of Service	@IP used by the service
Default remote site	No survivability, no trunk redundancy	N/A
Remote site with Mediation Server	No hairpinning through central site Functionning mode: - users remain registered to HQ - SIP trunk is handled by local MS - Nominal ougoing and incoming traffic goes through MS	MS IP@
Remote site with Gateway-SBA (Survivability Branch Appliance) or SBS (Survivability Branch Server)	- Remote survivability for the site hosting the Gateway-SBA or SBS Functionning mode: - SIP trunk is handled by SBA (not SBC part) or SBS - Nominal ougoing and incoming traffic goes through SBA/SBS - In Case of SBA/SBS crash or Local SIP Trunk connectivity loss to a-SBC, remote site phones will re-register on HQ and attempt to use the HQ trunk for incoming and outgoing traffic	SBA MS or SBS MS IP@
Remote site with Gateway-SBA (Survivability Branch Appliance)	- Remote survivability for the site hosting the Gateway-SBA Functioning mode: - SIP trunk is handled by a-SBC part of the appliance (not MS part) - Nominal outgoing and incoming traffic goes through a-SBC - In case of SBA/SBS crash or Local SIP Trunk connectivity loss to a-SBC, remote site phones will re-register on HQ and attempt to use the HQ trunk for incoming and outgoing traffic	SBC IP@
Remote site of "RS-GW" type (Gateway without SBA module)	- Allows local users to use local trunk though they are registered on central HQ (Microsoft "Media-Bypass" feature set locally) - Save bandwidth on central HQ	
Remote site cascaded to Remote site with Gateway-SBA or SBS	Allows hairpinning through the closest SBA/SBS instead of through HQ	N/A

2.2 Cloud Connector Edition architectures

Head Quarter (HQ) architecture	Level of Service	@IP used by the service	
CCE with SBC - Trunk on SBC	No redundancy	SBC IP@	
Dual CCE-SBC - Trunk on SBC - High Availability with single @IP	Redundancy with load balancing behavior	SBCs virtual IP@	
Dual CCE-SBC - Trunk on SBC - Resiliency	Redundancy with nominal/backup behavior	SBC1 IP@	SBC2 IP@

3 BTIP/BTalk certified versions

3.1 Lync 2013

Certified Lync Server Cumulative Updates:

- CU January 2017
- CU August 2016
- CU April 2016
- CU January 2016
- CU July 2015
- CU February 2015
- CU November 2014
- CU September 2014
- CU January 2014
- CU October 2013
- CU February 2013
- RTM

Certified SBC:

- Sonus (Ribbon) SBC 1000/2000 6.1
- Sonus (Ribbon) SBC 1000/2000 6.0.1.build 441
- Sonus (Ribbon) SBC 1000/2000 5.0
- Sonus (Ribbon) SBC 1000/2000 4.1

3.2 Skype for Business 2015

Certified Skype for Business 2015 Cumulative Updates:

- CU January 2019 (in progress)
- CU December 2017
- CU May 2017
- CU June 2016
- CU March 2016
- CU November 2015
- RTM

Certified SBC:

- Ribbon SBC 1000/2000 8.0 (in progress)
- Ribbon SBC 1000/2000 7.0
- Sonus (Ribbon) SBC 1000/2000 6.1
- Sonus (Ribbon) SBC 1000/2000 6.0.1 build 441
- Sonus (Ribbon) SBC 1000/2000 5.0.1 build 399
- AudioCodes M800/1000 7.20A

- AudioCodes M800/1000 7.00A

3.3 Cloud Connector Edition

Certified devices and software:

- Mediation Server 6.0.9319.410
- CCE AudioCodes appliance (Wizard version) V2.1.0.19
- CCE AudioCodes Mediant software 7.2

Cloud Connector Edition is no longer supported for new deployments. Consider Microsoft Teams instead.

4 Lync 2013 Configuration Checklist

Menu	Value
DNS requirements	
From the DNS interface: ✓ Start > Administrative Tools > DNS	FQDNs of each server (**DNS A** record)
From the DNS interface: ✓ Start > Administrative Tools > DNS	FQDNs of both nominal and backup aSBC on each site (**DNS A** record)
From the DNS interface: ✓ Start > Administrative Tools > DNS	**ucupdates-r2**.*<SIP domain>* (**DNS A** record) that maps the FQDN of each server hosting Device Update Service
From the DNS interface: ✓ Start > Administrative Tools > DNS	**_sipinternaltls._tcp**.*<SIP domain>* (**DNS SRV** record/**Port 5061**) that maps the FQDN of each server offering automatic client sign-in service
From the DNS interface: ✓ Start > Administrative Tools > DNS	**_ntp._udp**.*<SIP domain>* (**DNS SRV** record/**Port 123**) that maps the FQDN of the Domain Controller
DHCP requirements	
From the customer interface of the router	**Following command** has to **be typed** for each customer interface of the router: ✓ ip helper-address *"IP@ of the DHCP Server"*
From the Microsoft Lync Server Management Shell interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	**Following command** has to **be typed**: ✓ Set-CsRegistrarConfiguration **–EnableDHCPServer $True**
From the DHCP interface: ✓ Start > Administrative Tools > DHCP > "select a scope" > Scope Options	DHCP Option **006 DNS Servers** has to **be activated**
From the DHCP interface: ✓ Start > Administrative Tools > DHCP > "select a scope" > Scope Options	"*DHCPUtil.exe*" and "*DHCPConfigScript.bat*" **files*** have to **be added** on a network share that can be accessed from the DHCP server *(*) DHCP Options **120 / 43** have to **be configured** (only if required by the type of endpoints deployed)*
From command prompt from the DHCP server: ✓ Start > Run… > cmd	**Following command** has to **be typed***: ✓ \\<FileShare>\DHCPUtil.exe -SipServer *"SipServer"* -WebServer *"WebServer"* –RunConfigScript *(*) DHCP Options **120 / 43** have to **be configured** (only if required by the type of endpoints deployed)*
From the DHCP interface: ✓ Start > Administrative Tools > DHCP > "select a scope" > Scope Options	DHCP Option **042 NTP Servers** has to **be activated*** *(*) only if required by the type of endpoints deployed*
AD requirements	
From the AD interface: ✓ Start > Administrative Tools > Active Directory Users and Computers	**Each server role** has to **be joined to domain**
Mediation Server Configuration	

Menu	Value
From the Microsoft Lync Server Topology Builder interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Topology Builder ✓ Lync Server 2013 > "select a Central Site" > Mediation pools > "select a Mediation Server"	**TCP listening port** has to be set to **5060**
Enterprise Edition – Standalone Mediation Servers - Configuration	
From the standalone Mediation Server: ✓ Start > Control Panel > Network and Internet > Network Connections > "select the interface of the Mediation Server" > Properties > Internet Protocol Version 4 (TCP/IPv4)	**Default gateway** has to be **filled** **Preferred DNS server** has to be **filled**
From the standalone Mediation Server: ✓ Start > Control Panel > Network and Internet > Network Connections > "select the interface of the Mediation Server" > Properties > Internet Protocol Version 4 (TCP/IPv4) > Advanced… > DNS tab	**Register this connection's addresses in DNS** has to be **checked**
From the Microsoft Lync Server Topology Builder interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Topology Builder ✓ Lync Server 2013 > "select an Enterprise Edition Central Site" > Mediation pools	2 **Mediation pools** have to **be created** for 2 Standalone Mediation Servers: ✓ **Multiple computer pool with the Standalone Mediation Server pool 1 (=FQDN of the Mediation Server pool 1)** ✓ **Multiple computer pool with the Standalone Mediation Server pool 2 (=FQDN of the Mediation Server pool 2)** **Enable TCP** port has to be **checked** **Listening port** has to be set to **5060** for each standalone Mediation Server pool
From the Microsoft Lync Server Topology Builder interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Topology Builder ✓ Lync Server 2013 > "select an Enterprise Edition Central Site" > Shared Components > PSTN gateways	2 **PSTN gateways** have to **be created** ✓ 1st: **FQDN of Nominal aSBC** (Mediation server pool 1) ✓ 2nd: **FQDN of Backup aSBC** (Mediation server pool 1) Check that **Use all configured IP addresses** is **selected** for each Mediation Server: **Enable IPv4** has to **checked** and **Enable IPv6** has to be **unchecked** for each Mediation Server Next window contains the **Trunk root** information as followed **Listening port for IP/PSTGN gateway** has to be set to **5060** **SIP Transport Protocol** has to be set to **TCP** **Associated Mediation Server** has to match the **FQDN of Mediation Server pool 1**

Menu	Value
From the Microsoft Lync Server Topology Builder interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Topology Builder Lync Server 2013 > "select an Enterprise Edition Central Site" > Shared Components > Trunks	2 **Additional Trunks** have to **be created** ✓ 1st: **Associated PSTN gateway of Nominal aSBC** (Mediation server pool 2) ✓ 2nd: **Associated PSTN gateway of Backup aSBC** (Mediation server pool 2) **Listening port for IP/PSTGN gateway** has to be set to **5060** **SIP Transport Protocol** has to be set to **TCP** **Associated Mediation Server** has to match the **FQDN of Mediation Server pool 2**
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Route	4 **Routes** have to **be created** for 2 Standalone Mediation Servers*: ✓ **from Standalone Mediation Server 1a to nominal aSBC (=FQDN of the nominal aSBC from the Mediation Server 1a)** ✓ **from Standalone Mediation Server 1b to backup aSBC (=FQDN of the backup aSBC from the Mediation Server 1b)** ✓ **from Standalone Mediation Server 2a to nominal aSBC (=FQDN of the nominal aSBC from the Mediation Server 2a)** ✓ **from Standalone Mediation Server 2b to backup aSBC (=FQDN of the backup aSBC from the Mediation Server 2b)** A **gateway (=FQDN of the nominal aSBC from the Mediation Server 1a)** has to **be associated to First Route** A **gateway (=FQDN of the backup aSBC from the Mediation Server 1b)** has to **be associated to Second Route** A **gateway (=FQDN of the nominal aSBC from the Mediation Server 2a)** has to **be associated to Third Route** A **gateway (=FQDN of the backup aSBC from the Mediation Server 2b)** has to **be associated to Fourth Route** A **PSTN Usage** has to **be associated to each Route** *(*) Routes for a site Headquarter includes its Remote Sites without MGW*
Enterprise Edition – Standalone Mediation Servers – Specific configuration for Remote Site deployment	
From the Microsoft Lync Server Topology Builder interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Topology Builder ✓ Lync Server 2013 > "select a Branch Sites" > Lync Server 2013 > Shared Components > PSTN gateways	2 **PSTN gateways** have to **be created** for the Standalone Mediation Server: ✓ **to nominal aSBC (=FQDN of the nominal aSBC)** ✓ **to backup aSBC (=FQDN of the backup aSBC)** **Check** that **2 Trunks** were created while creating PSTN gateways **Listening port** has to be set to **5060** for each PSTN gateways **SIP transport protocol** has to be set to **TCP** for each PSTN gateways
From the Microsoft Lync Server Topology Builder interface:	A **Mediation pools** has to **be configured** for the Standalone Mediation Server:

Menu	Value
✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Topology Builder ✓ Lync Server 2013 > "select a Branch Sites" > Mediation pools	✓ One single computer pool (=FQDN of the Mediation Server) 2 PSTN Gateways have to be associated to the Standalone Mediation Server: ✓ FQDN of the nominal aSBC ✓ FQDN of the backup aSBC Use all configured IPv4 IP addresses has to be checked: Listening port has to be set to 5060
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Dial Plan	A Site dial plan has to be created for each Remote site with a Standalone Mediation Server A New Normalization Rule for extension numbers has to be associated: ✓ Pattern to match has to be edited ✓ Translation rule has to be edited ✓ Internal extension has to be checked Normalization Rule for extension numbers has to be moved up before the existent Normalization Rule for Prefix All
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Voice Policy	An User policy has to be created for each Remote site with a Standalone Mediation Server Enable call park has to be checked Enable PSTN reroute has to be unchecked A PSTN Usage has to be associated to each User policy
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Users > "select an user of Remote Site with a Standalone Mediation Server"	The specific voice policy has to be assigned to each RS (with a Standalone Mediation Server) user
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Route	2 Routes have to be created for each Remote site with a Standalone Mediation Server : ✓ to nominal aSBC ✓ to backup aSBC A gateway (=FQDN of nominal aSBC) has to be associated to First Route A gateway (=FQDN of backup aSBC) has to be associated to Second Route A PSTN Usage has to be associated to each Route
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Trunk Configuration	A Site trunk has to be created for each Remote site with a Standalone Mediation Server Enable refer support has to be unchecked Encryption support level has to be set to Optional A Translation Rule (to remove digit "+" for outbound calls to BTIP SIP) has to be associated to each Site trunk
From the Microsoft Lync Server Management Shell interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	Following commands have to be typed for each Remote site with a Standalone Mediation Server: ✓ Set-CsTrunkConfiguration –Identity *"Site"* –RTCPActiveCalls $False ✓ Set-CsTrunkConfiguration –Identity *"Site"* –RTCPCallsOnHold

Menu	Value
	$False
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Route	A **PSTN Usage of Branch Sites** has to **be associated to each Route of Headquarter** Note that routes must be in the following order: 1) **Route of Branch Sites to nominal aSBC** 2) **Route of Branch Sites to backup aSBC** 3) **Route of Headquarter to nominal aSBC** 4) **Route of Headquarter to backup aSBC**
Users Configuration	
From the AD interface: ✓ Start > Administrative Tools > Active Directory Users and Computers ✓ New > User	**User information** (the user logon name) has to **be filled**
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Users > Enable users > Add… > Find	Each user has to **be assigned to a pool** **Format <SAMAccountName**>@<*SIP domain*> has to **be selected** **Telephony** has to be set to **Enterprise Voice** An ***E164 telephone number*** format followed by **an extension number** has to be entered in the **line URI**
Routing mechanisms for Microsoft Lync Server 2013	
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Dial Plan	A **Site dial plan** has to **be created for each site** A **New Normalization Rule** for extension numbers has to **be associated**: ✓ **Pattern to match** has to **be edited** ✓ **Translation rule** has to **be edited** ✓ **Internal extension** has to **be checked** **Normalization Rule** for extension numbers has to **be moved up** before the **existent Normalization Rule** for Prefix All *(*) Site dial plan for a site Headquarter includes its Remote Sites without MGW*
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Voice Policy	A **Site policy** has to **be created for each site*** **Enable call park** has to **be checked** **Enable PSTN reroute** has to **be unchecked** **A PSTN Usage** has to **be associated to each Site policy** *(*) Site policy for a site Headquarter includes its Remote Sites without MGW*
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Route	2 **Routes** have to **be created for each site*** : ✓ **to nominal aSBC** ✓ **to backup aSBC** A **gateway (=FQDN of nominal aSBC)** has to **be associated to First Route** A **gateway (=FQDN of backup aSBC)** has to **be associated to Second Route** A **PSTN Usage** has to **be associated to each Route** *(*) Routes for a site Headquarter includes its Remote Sites without MGW*

Menu	Value
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Trunk Configuration	A **Site trunk** has to **be created for each site*** **Enable refer support** has to **be unchecked** **Enable forward call history** has to **be checked** **Encryption support level** has to be set to **Optional** A **Translation Rule** (to remove digit "+" for outbound calls to BTIP SIP) has to **be associated to each Site trunk** *(*) Site trunk for a site Headquarter includes its Remote Sites without MGW*
From the Microsoft Lync Server Management Shell interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	**Following commands** have to **be typed for each site***: ✓ Set-CsTrunkConfiguration –Identity *"Site"* **–RTCPActiveCalls $False** ✓ Set-CsTrunkConfiguration –Identity *"Site"* **–RTCPCallsOnHold $False** *(*) A Site Headquarter includes its Remote Sites without MGW*
From the Microsoft Lync Server Management Shell interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	**Following command** has to **be typed**: ✓ Set-CsMediaConfiguration **–EncryptionLevel SupportEncryption**
Specific Normalization Rule	
Voice Mail Feature : From the Microsoft Lync Server Control Panel interface: Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Dial Plan	A **Normalization Rule** has to **be associated to each Site dial plan*** *(*) to be adapted according the client architecture*
Call Park Feature : From the Microsoft Lync Server Control Panel interface: Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel Voice Routing > Dial Plan	A **Normalization Rule** has to **be associated to each Site dial plan*** *(*) to be adapted according the client architecture*
Music On Hold	
From the Microsoft Lync Server Management Shell interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell Note: The customized MoH is played For Softphone Devices The embedded firmware MoH is played For Lync Phone Edition Devices	**The global clientpolicy is used:** **Following commands** have to **be typed for Softphones** ✓ New-CsClientPolicy –Identity **global** –EnableClientOnHold **$True** –MusicOnHoldAudioFile *<FILE PATH>* Note: No more need to associate Each user **to a specific Client Policy,** check only while user creation that client policy field is set to **Automatic**

Menu	Value
Unified Messaging on Microsoft Exchange Server 2013	
From the Exchange Server Administration Url: https://exchangeserverIPaddress/ecp logon using administrator credential ✓ Select **Unified Messaging** ✓ Double click on **UM DialPlan** then click on **configure**	On the General tab, **VoIP security** has to be set to **Secured**
From the Microsoft Lync Server Management Shell interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	**Following command** has to **be typed** Set-UMservice –Identity *<ExchangeServer>* **–UMStartUpMode TLS**
From the Exchange Server Administration Url: https://exchangeserverIPaddress/ecp logon using administrator credential ✓ Select **Unified Messaging** ✓ Double click on **UM DialPlan** then click on **configure**	On the Settings tab, **Audio codec** has to be set to **GSM**
From the Exchange Server Administration Url: https://exchangeserverIPaddress/ecp logon using administrator credential ✓ Select **Unified Messaging** ✓ Double click on **UM DialPlan** then click on **configure**	On the Outlook Voice Access, A **Subscriber Access Number** (E164 telephone number format) has to **be added**
From the Exchange UM server (Config file): ✓ C:\Program Files\Microsoft\Exchange Server\V15\Bin\MSExchangeUM	<add key="MinimumRtpPort" value="**49152**" /> <add key="MaximumRtpPort" value="**57500**" />
From the Exchange UM server (Local Group Policy Editor): ✓ Start > Run… > gpedit.msc	**Audio Policy-based QoS** is configured Source port: **49152:57500** Protocol: **TCP and UDP** DSCP: **46**
From the Front End Server: ✓ C:\Program Files\Common Files\Microosft Lync Server 2013\Support\OcsUmUtil.exe ✓ On the OcsUmUtil tool: ▪ Click **Load Data** ▪ Double click on **contacts**	Select **Use this pilot number from Exchange UM** has to match the subscriber access number (E.164 telephone number format)

Menu	Value
Analog Devices Configuration	
From the Microsoft Server 2013 Control Panel and Management Shell	
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Voice Policy	An **User policy** has to **be created for each site with Analog Devices** **Enable call park** has to **be checked** **Enable PSTN reroute** has to **be unchecked** An **Existent PSTN Usage** has to **be associated** by selecting it
From the Microsoft Lync Server Management Shell interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	**Following command** has to **be typed for each Analog Device :** ✓ New-CsAnalogDevice *"LineURI"* –DisplayName *"DisplayName"* –RegistrarPool *"RegistrarPool"* **–AnalogFax $False** –Gateway *"Gateway"* –OU *"OU"*
From the Microsoft Lync Server Management Shell interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	**Following command** has to **be typed for each Analog Device :** ✓ Set-CsAnalogDevice -Identity *"Identity"* –DisplayNumber *"DisplayNumber"* ✓ Set-CsAnalogDevice -Identity *"Identity"* –LineURI *"LineURI"* ✓ Grant-CsVoicePolicy -Identity *"Identity"* –PolicyName *"PolicyName"*
From the Sonus (NET) (UX 1000/2000 SBA)	
From the UX Web User interface: ✓ Settings Tab > Media > Media List	A **Media List** has to **be created:** Media List for Analog Devices: **Media Profiles List** has to match the **Voice Codec Profile G711 A-Law** ➢ *Digit Relay* **Digit (DTMF) Relay Type** has to be set to **RFC 2833** **Digit Relay Payload Type** has to be set to **101**
From the UX Web User interface: ✓ Settings Tab > CAS > CAS Signaling Profiles	A **FXS CAS Signaling Profiles** has to **be created**
From the UX Web User interface: ✓ Settings Tab > Signaling Groups	A **CAS Signaling Group** has to **be created:** CAS Signaling Group for Analog Devices connectivity: ➢ *CAS Protocol* **CAS Signaling Profile** has to match the **CAS Signaling Profile** for Analog Devices ➢ *Channels and Routing* **Channel Hunting** has to be set to **Own Number** **Tone Table** has to match the **Analog Device Tone Table** **Call Routing Table** has to match the **Analog Device Call Routing Table**** **for routing calls received from Analog Devices** ➢ *Assigned Channels* **Channel Phone Number** has to match the **Analog Device phone number** *(**) Please note that Call Routing Table must be added later (after specific Call Routing Tables configuration)*

Menu	Value
From the UX Web User interface: ✓ Settings Tab > Transformation	A **Transformation Table** has to **be created**: Transformation Table for Lync to Analog Device calls: ➢ *Input Field* **Value** has to match **the Analog Device telephone number E.164 format** ➢ *Output Field* **Value** has to be set to **\1**
From the UX Web User interface: ✓ Settings Tab > Call Routing Table	A **Call Routing Table** has to **be created** for calls received from Lync (if it doesn't exist) or additionals **Call Routing Entries** have to **be created** in the Call Routing Table for calls received from Lync (if it exists) Call Routing Entry for Lync to Analog Device calls: ➢ *Route Details* **Number/Name Transformation Table** has to match the **Transformation Table for Lync to Analog Device calls** ➢ *Destination Information* **Destination Signaling Groups** has to match the **Signaling Group for Analog Device connectivity** ➢ *Media* **Media List** has to match the **Media List for Analog Device** A **Call Routing Table** has to **be created** for calls received from the Analog Devices Call Routing Entry Tenor to Lync calls: ➢ *Route Details* **Number/Name Transformation Table** has to match the **Transformation Table used to send a phone number without modification** ➢ *Destination Information* **Destination Signaling Groups** has to match the **Signaling Group for Lync connectivity** ➢ *Media* **Media List** has to match the **Media List for Analog Device** *(**) Please note that Call Routing Table must be added to CAS Signaling Groups configuration*
From the AudioCodes (Mediant 800/1000 SBA)	
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > TDM submenu > Select TDM Bus Settings	**PCM Law Select** has to be set to **A-Law** **TDM Bus Clock Source** has to be set to **Network**
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > Media submenu > Select Voice Settings From the AudioCodes Web User interface:	**CAS Transport Type** has to be set to **CASRFC2833Relay** Check that **Analog Settings** are **filled** with default value

Menu	Value
✓ Configuration Tab (full) >VoIP menu > Media submenu > Select Analog Settings	
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > Coders and Profiles submenu > Select Analog Coders	**Coder Name** has to be set to **G711 A-Law** **Packetization Time** has to be set to**20ms** **Payload Type** has to be set to **8**
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Trunk Group > Select Trunk Group From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Trunk Group > Select Trunk Group Settings	A **Trunk Group** has to be created with the following parameters: **Module** has to be set to **Module 2 FXS** **Channels** has to be set to the **Analog Device** port on the gateway **Phone Number** has to match the **Analog Device** phone number **Trunk Group ID** has to match the **Analog Device** Trunk Group ID **Tel Profile ID** has to match the **Tel Profile ID** if configured else the **default profile 0** has to be associated **Trunk Group ID** has to match the **Analog Device** Trunk Group ID **Channel Select Mode** has to be set to **By Dest Phone Number**
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Manipulation > Select Dest Number IP -> Tel From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Manipulation > Select Dest Number Tel -> IP	**Destination Prefix** has to match the **Analog Device** Phone Number as declared on the **Trunk Group Table** **Source Trunk Group** has to match the **Analog Device** **Trunk Group** already created **Prefix to add** has to match a rule manipulation in order to has a **E.164 format number** to send to Lync Server
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Routing > Select Tel to IP Routing From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Routing > Select IP to Tel Routing	**Tel to IP Routing Mode** has to be set to **Route Calls after manipulation** **Src IP Group ID** has to be set to **-1** **Src Trunk Group ID** has to match the **Analog Device Group ID** **Dest IP Group ID** has to match the **Lync Server Group ID** **IP toTel Routing Mode** has to be set to **Route Calls before manipulation** **Dest Phone Prefix** has to match the **Analog Device** phone number **Trunk Group ID** has to match the **Analog Device Trunk Group ID** **IP Profile ID** has to match the **Tel Profile ID** if configured else the **default profile 0** has to be associated

E1/T1 Access Configuration	
From the Sonus (NET) (UX 1000/2000 SBA) with FXS ports	
From the UX Web User interface: ✓ Settings Tab > Signaling Groups	An **ISDN Signaling Group** has to **be created**: ISDN Signaling Group for E1/T1 connectivity: ➢ *Port and Protocol* **Port Name** has to be **selected** **Switch Variant** has to be set to **Euro ISDN** ➢ *Channels and Routing* **Tone Table** has to match the **Tone Table if** configured else the **Default Tone Table** has to be selected **Call Routing Table** has to match the **E1/T1 Call Routing Table** for routing calls received from E1/T1 access** *(**) Please note that Call Routing Table must be added later (after specific Call Routing Tables configuration)*
From the UX Web User interface: ✓ Settings Tab > Transformation From the UX Web User interface: ✓ Settings Tab > Transformation	Transformation Table for T2 to Lync calls A **Transformation Table** has to **be created**: Transformation Entry for T2 to Lync calls (Called): ➢ *Input Field* **Type** has to be set to **Called Address/Number** **Value** has to match the **T2 number** ➢ *Output Field* **Type** has to be set to **Called Address/Number** **Value** has to match the **E.164 Lync number** Transformation Entry for T2 to Lync calls (Calling): ➢ *Input Field* **Type** has to be set to **Calling Address/Number** **Value** has to be **filled** ➢ *Output Field* **Type** has to be set to **Calling Address/Number** **Value** has to be **filled** Transformation Table for Lync to T2 calls A **Transformation Table** has to **be created**: Transformation Entry for Lync to T2 calls (Called): ➢ *Input Field* **Type** has to be set to **Called Address/Number** **Value** has to be **filled** ➢ *Output Field* **Type** has to be set to **Called Address/Number**

Menu	Value
	Value has to be **filled** Transformation Entry for Lync to T2 calls (Calling): ➢ *Input Field* **Type** has to be set to **Calling Address/Number** **Value** has to be **filled** ➢ *Output Field* **Type** has to be set to **Calling Address/Number** **Value** has to be **filled**
From the UX Web User interface: ✓ Settings Tab > Call Routing Table	Call Routing Table for Lync to T2 calls A **Call Routing Table** has to **be created** for calls received from Lync (if it doesn't exist) or an additional **Call Routing Entry** has to **be created** in the Call Routing Table for calls received from Lync (if it exists) Call Routing Entry for Lync to T2 calls: ➢ *Route Details* **Number/Name Transformation Table** has to match the **Transformation Table for Lync to T2 calls** ➢ *Destination Information* **Destination Signaling Groups** has to match the **Signaling Group for E1/T1 connectivity** ➢ *Media* **Media List** has to match the **Media List without crypto** Call Routing Table for T2 to Lync calls A **Call Routing Table** has to **be created** for calls received from E1/T1 access Call Routing Entry for T2 to Lync calls: ➢ *Route Details* **Number/Name Transformation Table** has to match the **Transformation Table T2 to Lync calls** ➢ *Destination Information* **Destination Signaling Groups** has to match the **Signaling Group for Lync connectivity** ➢ *Media* **Media List** has to match the **Media List without crypto** *(**) Please note that Call Routing Table must be added to ISDN/SIP Signaling Groups configuration*
From AudioCodes Mediant (800/ 1000 SBA)	
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > PSTN submenu > Select Trunk Settings	**Protocol Type** has to be set to **E1 Euro ISDN** **Line Code** has to be set to**HDB3** **Framing Method** has to be set to **E1 FRAMING MFF CRC4 EXT**

Menu	Value
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Trunk Group > Select Trunk Group From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Trunk Group > Select Trunk Group Settings	A **Trunk Group** has to be created with the following parameters: **Module** has to be set to **Module 1 PRI** **Channels** has to be set to **T2 line number of channels** **Phone Number** has to match the **T2** phone number **Trunk Group ID** has to match the **T2** Trunk Group ID **Tel Profile ID** has to match the **Tel Profile ID** if configured else the **default profile 0** has to be associated **Trunk Group ID** has to match the **T2 Trunk Group ID** **Channel Select Mode** has to be set to **Cyclic Ascending**
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > Control Network submenu > Select Proxy Set Table	A **Proxy Set Table** has to be created with the following parameters: **Proxy Set ID** has to be **filled** **Proxy Address** has to match the **SBA FQDN** **Transport Type** has to be set to **TLS** **Enable Proxy Keep Alive** has to be set to **Using Options**
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > Control Network submenu > Select IP Group Table	An **IP Group Table** has to be created with the following parameters: **Index** has to be **filled** **Type** has to be set to **Server** **Proxy Set ID** has to match the **SBA proxy Set ID** already created
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Manipulation > Select Dest Number IP -> Tel From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Manipulation > Select Dest Number Tel -> IP	**Destination Prefix** has to be filled with the **prefix** of the received number **Source IP Address** has to match the **SBA IP Address** **Stripped Digits from Left** has to be **filled** **Prefix to Add** has to be **filled** **Source Trunk Group** has to match the **T2 Trunk Group** already created **Destination Prefix** has to match the **T2 Line number** **Stripped Digits from Left** has to be **filled** **Prefix to add** has to match the corresponding Lync device on **E.164 format number**
From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu > GW and IP to IP submenu > Routing > Select Tel to IP Routing From the AudioCodes Web User interface: ✓ Configuration Tab (full) >VoIP menu >	**Tel to IP Routing Mode** has to be set to **Route Calls after manipulation** **Src IP Group ID** has to be set to **-1** **Src Trunk Group ID** has to match the **T2 Group ID** **IP toTel Routing Mode** has to be set to **Route Calls before manipulation** **Source IP Address** has to match the **Gateway IP Address**

Menu	Value
GW and IP to IP submenu > Routing > Select IP to Tel Routing	**Trunk Group ID** has to match the **T2 Trunk Group ID** **IP Profile ID** has to match the **Tel Profile ID** if configured else the **default profile 0** has to be associated
Dial-in Conferencing feature	
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Dial Plan	A **Dial-in conferencing region** has to **be added** (associated to Dial-in Access Number)
Call Back feature	
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Routing > Trunk Configuration	A specific **translation Rule** has to **be associated to each Site trunk** *(*) to be adapted to the client architecture* *(**) first priority before translation rule removing the « + » digit*
Call Park feature	
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel ✓ Voice Features	A Number range has to be created **for each Site** *(*) to be adapted to the client architecture*
CALL ADMISSION CONTROL	
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel Network Configuration > Global	Edit Global Setting –Global Check **Enable call admission control**

Menu	Value
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel Network Configuration > Bandwidth Policy	Create Bandwidth Policy for CAC "from site to WAN" New *"name"* Audio limit: according to site sizing Audio session limit: 100 Create Bandwidth Policy for CAC "from Edge to WAN" New *"name"* Audio limit: according to site sizing Audio session limit: 9999999999 Create Bandwidth Policy for CAC "from site to SIP Trunk" New *"name"* Audio limit: according to site sizing Audio session limit: 97 Create Bandwidth Policy for CAC "0" New *"name"* Audio limit: 0 Audio session limit: 40
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel Network Configuration > Region	Create WAN Region New *"name"* Associate site name Uncheck **Enable audio alternate path** (recommended) Check or Uncheck **Enable video alternate path** to your convenience
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel Network Configuration > Site	Create **Site for users** and associate a **Bandwidth policy** between this **Site** and the **Region** New *"name"* Associate **Region** Associate **Bandwidth Policy** for CAC "from site to WAN" Create **Site for edge** and associate a **Bandwidth policy** between this **Site** and the **Region** New *"name"* Associate **Region** Associate **Bandwidth Policy** for CAC "from Edge to WAN" Create **Site for aSBC** and associate a **Bandwidth policy** between this **Site** and the **Region** New *"name"* Associate **Region** Associate **Bandwidth Policy** for CAC "0"
From the Microsoft Lync Server Management Shell interface: Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	Creation of Bandwidth Policy for intersite links New-CsNetworkInterSitePolicy –Identity *"name of the intersitelink"* -BWPolicyProfileID *"name of the policy for CAC from site to SIP Trunk"* -NetworkSiteID1 *"name of the site for user"* -NetworkSiteID2 *"name of the sitefor the SBC"*

Menu	Value
From the Microsoft Lync Server Control Panel interface: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Control Panel Network Configuration > Subnet	Create subnet for each site **New** Add **subnet ID** Add **mask** Associate with **Network site ID**
Quality of Service	
From the Microsoft Lync Management Shell interface:: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	Enable client media port range: **Set-CsConferencingConfiguration –ClientMediaPortRangeEnabled $true –ClientMediaPort 50000 –ClientAudioPort 50060 –ClientVideoPort 57600 –ClientAppSharingPort 32800**
From the Microsoft Lync Management Shell interface:: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	Configure ApplicationSharing port range on Lync application servers: **Set-CsApplicationServer ApplicationServer:**<serverFQDN> **-AppSharingPortStart 32768 –AppSharingPortCount 16383**
From the Microsoft Lync Management Shell interface:: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	Configure ApplicationSharing port range on Lync Conferencing servers: **Set-CsApplicationServer ConferencingServer:**<serverFQDN> **-AppSharingPortStart 32768 –AppSharingPortCount 16383**
Configuration requirements (warnings)	
Configuring Clients ports range for LPE and SoftPhone	
From the Microsoft Lync Management Shell interface:: ✓ Start > All Programs > Microsoft Lync Server 2013 > Lync Server Management Shell	Enable client media port range: **Set-CsConferencingConfiguration –ClientMediaPortRangeEnabled $true –ClientAudioPort 50060 –ClientAudioPortRange 48**
Configuring Clients ports range for VVX	
✓ Using VVX Web UI	Navigate through the VVX Web Interface: http:<VVX_IP_Address> Go to Settings tab > Network menu > RTP Configure the Port Range Start to: 50060
✓ Using VVX configuration file (.cfg)	Configure the following line in the VVX configuration file : `tcpIpApp.port.rtp.mediaPortRangeStart="50060"` Import the new configuration file to the VVX using the WebUI or through the IIS server
Others Devices	
Check that the audio range port respect the OBS recommendations	The default audio range is: 50060-50107.

5 Skype for Business 2015 with or without Ribbon/AudioCodes Configuration Checklist

5.1 Common core configuration checklist

Menu	Value
Skype for Business Configuration (Topology Builder)	
On the Topology builder interface: ✓ Central Site > skype for business 2015 > **Mediation Pools**, right click and Edit properties	**Enable TCP** port has to be **checked** **Listening port** has to be set to **5060** for each Mediation Server in skype for Business topology
On the Topology builder interface: ✓ Central Site > Skype for Business 2015 > Shared components > Trunks, right click edit properties	**FQDN** of **nominal aSBC** for BT/BTIP traffic Specify **nominal aSBC BT/BTIP trunk name** Listening port for IP/PSTN gateway**: 5060** SIP Transport protocol: **TCP** Associated Mediation Server: **Mediation Server FQDN** Associated Mediation Server port: **5060**
On the Topology builder interface: ✓ Central Site > Skype for Business 2015 > Shared components > Trunks, right click edit properties	**FQDN** of **backup aSBC** for BT/BTIP traffic Specify **backup aSBC BT/BTIP trunk name** Listening port for IP/PSTN gateway**: 5060** SIP Transport protocol: **TCP** Associated Mediation Server: **Mediation Server FQDN** Associated Mediation Server port: **5060**
Skype for Business Configuration (Control Panel)	
Dial Plan On the Skype for Business Server Control Panel Interface: ✓ Voice Routing > Dial Plan	Type: **Dial Plan** type Name: **Dial Plan** name
Voice Policy On the Skype for Business Server Control Panel Interface: ✓ Voice Routing > Voice Policy	Name: **Voice Policy** name Enable call park: **Checked** Enable PSTN reroute: **Unchecked**
PSTN usage On the Skype for Business Server Control Panel Interface: ✓ Voice Routing > Voice Policy	New PSTN Usage record Name: **BT/BTIP PSTN Usage name**
Routes (aSBC nominal route) On the Skype for Business Server Control Panel Interface: ✓ Voice Routing > Voice Policy	Edit PSTN Usage record Associated routes → New Name: **aSBC nominal Route name** Associated Trunks → Add **Select** corresponding **aSBC nominal Trunk** from drop down list
Routes (aSBC backup route) On the Skype for Business Server Control Panel Interface: ✓ Voice Routing > Voice Policy	Edit PSTN Usage record Associated routes → New Name: **aSBC backup Route name** Associated Trunks → Add

Menu	Value
	Select corresponding **aSBC backup Trunk** from drop down list
Trunk configuration On the Skype for Business Server Control Panel Interface: ✓ Voice Routing > Trunk configuration	New Name: **BT/BTIP Trunk name** Encryption support level : **Optional** Refer support : **None** Enable forward call History : **Checked**
Trunk configuration (SFB PowerShell) On the Skype for Business PowerShell Interface: ✓ ***Set-CsTrunkConfiguration –Identity <Site> –RTCPActiveCalls $False*** ✓ ***Set-CsTrunkConfiguration –Identity <Site> –RTCPCallsOnHold $False***	**-Site:** The name of the site

5.2 Configuration checklist in case of Ribbon SBC 1000/2000 Gateway:

This configuration checklist will follow this color convention:

- **Green: in case of RS SBA**
- **Blue: in case of HQ with GW aboard**

Skype for Business– RS SBA or HQ with GW aboard - Trunk SIP on Ribbon SBC BT/BTIP configuration	
PSTN usage On the Skype for Server Control Panel Interface: ✓ Voice Routing > Voice Policy	New Ribbon SBC BT/BTIP PSTN Usage record Name: Ribbon SBC **BT/BTIP PSTN Usage name**
Route (Ribbon SBC BT/BTIP) On the Skype for Business Server Control Panel Interface: ✓ Voice Routing > Voice Policy	Edit PSTN Usage record Associated routes → New Name: **Ribbon SBC for BT/BTIP route name** Associated Trunks → Add **Select** corresponding **Ribbon SBC Trunk** from drop down list
Trunk configuration On the Skype for Business Server Control Panel Interface: ✓ Voice Routing > Trunk configuration	New Name: **Ribbon SBC for BT/BTIP Trunk name** Encryption support level : **Optional** Refer support : **None** Enable forward call History : **Checked**
Trunk configuration (SFB PowerShell) On the Skype for Business PowerShell Interface: ✓ ***Set-CsTrunkConfiguration –Identity <Site> –RTCPActiveCalls $False*** ✓ ***Set-CsTrunkConfiguration –Identity <Site> –RTCPCallsOnHold $False***	**-Site:** The name of the remote site
Ribbon SBC BT/BTIP configuration	

Menu	Value
SIP Profile	
On the Ribbon SBC gateway WebUi Interface: ✓ Settings >SIP > SIP Profile > Default SIP Profile	Session Timer: Session Timer: **Disabled** Header Customization: UA Header: **Ribbon SBC** Calling Info Source: **RFC Standard** Options Tags: 100rel: **Supported** Update: **Supported** SDP Customization: Send Number of Channels: **True** Connection Info In Media Section: **True** Digit Transmission Preference: **RFC 2833/Voice**
Media	
On the Ribbon SBC gateway WebUi Interface: ✓ Settings >Media > Media System Configuration	Port Range: Start Port: **16384** Number of Port pairs: **600** Echo Canceller Type Option: **Standard** Echo Cancel NLP Option: **Mild** Send STUN Packets: **Enabled** Music On Hold: Music on Hold Source: **File**
On the Ribbon SBC gateway WebUi Interface: ✓ Settings >Media > Media Profiles	Default G711a: Codec: **G711 A-law** Payload Size: **20 ms** Default G711µ: Codec: **G711 µ-law** Payload Size: **20 ms**
On the Ribbon SBC gateway WebUi Interface: ✓ Settings >Media > Media List	Default Media List: Media Profiles List: **G711a** **G711µ** Crypto Profile ID: **None** Media DSCP: **46** RTCP Mode: **RTCP** Dead Call Detection: **Disabled** Silence Suppression: **Disabled**
Secondary interface (only for RS SBA)	
On the Ribbon SBC gateway WebUi Interface: ✓ Settings >Node Interfaces > Logical Interfaces > Ethernet 1 IP	Configure Secondary Interface: **Enabled** Secondary Address: **IP address of the secondary interface of the Ribbon gateway (dedicated for BT/BTIP traffic)** Secondary Mask: **Mask corresponding to secondary interface subnet**
From/To SFB <-> Offnet routing BT/BTIP traffic	
SIP Server Table	
From/To SBA –BT/BTIP or From/To MS Pool –BT/BTIP On the Ribbon SBC gateway WebUi Interface: ✓ Settings >SIP > SIP Server Tables > Create SIP Server	Host: **SBA or MS Pool IP address** Port: **5060** Protocol: TCP

Menu	Value
	Monitor: **SIP Options**
From/To BT/BTIP-SBA or From/To MS Pool –BT/BTIP On the Ribbon SBC gateway WebUi Interface: ✓ Settings >SIP > SIP Server Tables > Create SIP Server	1st Entry: ACME aSBC nominal Host: **ACME aSBC nominal IP address** Port: **5060** Protocol: TCP Monitor: SIP Options 2nd Entry: ACME aSBC backup Host: ACME aSBC backup IP address Port: 5060 Protocol: TCP Monitor: SIP Options

5.3 Configuration checklist in case of AudioCodes Mediant 800/1000 E-SBC:

Skype for Business Configuration in case of RS-GW (Topology Builder)	
On the Topology builder interface: ✓ Branch Site > SfB Server > **Mediation Pools**, right click and Edit properties	Listening ports **TLS: 5067 – 5067** **Note:** **When both VISIT and B2G offer:** Listening ports TLS must be**: 5069**
On the Topology builder interface: ✓ Branch Site > SfB Server > Shared components > PSTN gateways, right click and **New IP/PSTN**	**FQDN** of dedicated gateway **for BT/BTIP traffic** Specify **BT trunk name**

Menu	Value
Gateway dedicated for BT/BTIP Then click Next to define **root trunk**	Listening port for IP/PSTN gateway**: 5067** SIP Transport protocol: **TLS** Associated Mediation Server: **Mediation Pool FQDN** Associated Mediation Server port: **5067** **Note:** **When both VISIT and B2G offer:** Listening ports TLS must be**: 5069**
Skype for Business Configuration in case of RS-SBA (Topology Builder)	
On the Topology builder interface: ✓ Branch Site > SfB Server > **Mediation Pools**, right click and Edit properties	Listening ports **TCP: 5060 – 5060**
On the Topology builder interface: ✓ Branch Site > SfB Server > Shared components > PSTN gateways, right click and **New IP/PSTN Gateway** dedicated for BT/BTIP Then click Next to define **root trunk**	**FQDN** of dedicated gateway **for BT/BTIP traffic** Specify **BT trunk name** Listening port for IP/PSTN gateway**: 5060** SIP Transport protocol: **TCP** Associated Mediation Server: **SBA FQDN** Associated Mediation Server port: **5060**
On the Topology builder interface: ✓ Branch Site > SfB Server > Shared components > PSTN gateways, right click and **New IP/PSTN Gateway** dedicated for E1/analog **PSTN & Analog Trunk:** ✓ Branch Site > SfB Server > Shared Components > Trunks, right click and **New Trunk**	**FQDN** of dedicated gateway **for E1/Analog traffic** Specify **PSTN&Analog trunk name** Listening port for IP/PSTN gateway**: 5060** SIP Transport protocol: **TCP** Associated Mediation Server: **SBA FQDN** Associated Mediation Server port: **5060**
Skype for Business Configuration in case of HQ with GW aboard (Topology Builder)	
On the Topology builder interface: ✓ Branch Site > SfB Server > **Mediation Pools**, right click and Edit properties	Listening ports **TCP: 5060 – 5060**
On the Topology builder interface: ✓ Branch Site > SfB Server > Shared components > PSTN gateways, right click and **New IP/PSTN Gateway** dedicated for BT/BTIP Then click Next to define **root trunk**	**FQDN** of dedicated gateway **for BT/BTIP traffic** Specify **BT trunk name** Listening port for IP/PSTN gateway**: 5060** SIP Transport protocol: **TCP** Associated Mediation Server: **MS Pool FQDN** Associated Mediation Server port: **5060**
AudioCodes Mediant 800/1000 E-SBC configuration	
TLS Context	
On the AudioCodes Mediant WebUi Interface: ✓ Setup > IP Network > Security > TLS Context	Links Tab TLS Context Certificate TLS Context Trusted Certificates
Media	
Voice Settings	
On the AudioCodes Mediant WebUi Interface: ✓ Setup > Signaling & Media > Media > Voice Settings	Silence Suppression: **Disable** DTMF Transport Type: **RFC 2833 Relay DTMF**

Menu	Value
Media Security	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Media > Media Security	Media security: **Enable**
RTP / RTCP Settings	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Media > RTP / RTCP Settings	RTP Base UDP Port: **16400**
Coders and Profiles	
Coders	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Coders and Profiles > Coders	Coders Table Coder Name : **G711A-law** Packetization time : **20** Rate : **64** Payloed Type : **8** Silence Suppression : **Disabled** Coder Name : **G711U-law** Packetization time : **20** Rate : **64** Payload Type : **0** Silence Suppression : **Disabled**
Coders Group Settings	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Coders and Profiles > Coders Group Settings	Coders Group ID Coder Name : **G711A-law** Packetization time : **20** Rate : **64** Payloed Type : **8** Silence Suppression : **Disabled** Coder Name : **G711U-law** Packetization time : **20** Rate : **64** Payload Type : **0** Silence Suppression : **Disabled**
IP Profile Settings	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Coders and Profiles > IP Profiles	SBA or SfB IP Profile ID (GW tab) Early Media : **Enable** Hold : **Enable** (SBC Media tab) Extension Coders : **Coders Group** Allowed Audio Coders : **Coders Group** Allowed Coders Mode : **Restriction and Preference** BTIP IP Profile ID (GW tab) Early Media : **Enable**

Menu	Value
	Hold : **Enable** (SBC Media tab) Extension Coders : **Coders Group** Allowed Audio Coders : **Coders Group** Allowed Coders Mode : **Restriction and Preference**
VoIP Network	
Media Realm Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > Media Realms	Skype Media Realm (SBA or SfB) Name : **MRm for Skype** IPv4 Interface Name : **Mediant IPv4 Interface** Port Range Start : **16900** Number of Media Session Legs : **50** Port Range End : **Filled automatically** Default Media Realm : **Yes** BTIP Media Realm Name : **MRm for BTIP** IPv4 Interface Name : **Mediant IPv4 Interface** Port Range Start : **16400** Number of Media Session Legs : **50** Port Range End : **Filled automatically** Default Media Realm : **No** **This range is used to accept incoming traffic from SBC in case of BTIP incoming calls, the defined range respects the OBS infra recommandations**
SRD Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > SRDs	Name : **DefaultSRD**
SIP Interface Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > SIP Interfaces	One SIP Interface Table for RS SBA Name : **SIPInterface_BTIP&SBA** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface** Application Type : **SBC** TCP Port : **5060** One SIP Interface Table for HQ with GW aboard Name : **SIPInterface_BTIP&SBA** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface** Application Type : **SBC** TCP Port : **5060** Two SIPs Interfaces Tables for RS GW Name : **SIPInterface_SfB** SRD : **DefaultSRD**

Menu	Value
	Network Interface : **Mediant IPv4 Interface** Application Type : **SBC** TLS Port : **5067** TLS Context Name : **TLS Context** Name : **SIPInterface_BTIP** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface** Application Type : **SBC** TCP Port : **5060**
Proxy Set Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > Proxy Sets	Proxy Set Table for Skype traffic (SBA or SfB) Name : **ProxySet for Skype Traffic** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface** SBC IPv4 SIP Interface : **SIP Interface for Skype Traffic** Proxy Load Balancing Method : **Round Robin** Proxy Keep-Alive Time : **60** Proxy Keep-Alive : **Using OPTIONS** (Proxy Address Table) 1 Entries : **FQDN or @IP of SBA:5060 TCP** (for SBA) X Entries : **FQDN or @IPs of Mediation Pool:5060 TCP** (for HQ with GW aboard) X Entries : **FQDN or @IPs of Mediation Pool:5067 TLS** (for SfB) Proxy Set Table for BTIP Traffic Name : **ProxySet for BTIP Traffic** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface** SBC IPv4 SIP Interface : **SIP Interface for BTIP Traffic** Proxy Keep-Alive Time : **600** Proxy Keep-Alive : **Using OPTIONS** Redundancy Mode : **Homing** Proxy Hot swap : **Enable** (Proxy Address Table) 2 Entries : **FQDN or @IP of aSBC ACME:5060 TCP**
IP Group Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > IP Groups	IP Group Table for Skype traffic (SBA or SfB) Name : **IPGroup for Skype Traffic** Type : **Server** Proxy Set : **Proxy Set for Skype Traffic** IP Profile : **IP Profile for Skype Traffic** Media Realm : **Media Realm for Skype traffic** IP Group Table for BTIP traffic Name : **IPGroup for BTIP Traffic**

Menu	Value
Setup > Signaling & Media > Message Manipulation > Message Manipulations and New+	Type : **Server** Proxy Set : **Proxy Set for BTIP Traffic** IP Profile : **IP Profile for BTIP Traffic** Media Realm : **Media Realm for BTIP traffic** Outbound Message Manipulation : **Manipulation Set ID** associated to User-Agent Message Manipulation User-Agent Message Manipulation Name: **User-Agent** Manipulation Set ID: **@ID** Message Type: **Any** Action subject: **Header.User-Agent** Action Type: **Modify** Action Value : **Header.User-Agent.Content + ' \ Skype for Business'**
SIP Definitions	
General Parameters	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > SIP Definitions > SIP Definitions General Settings	PRACK Mode : **Supported** Channel Select Mode : **Cyclic Ascending** Enable Early Media : **Enable**
SBC	
Allowed Audio Coders Group	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Coders and Profiles > Allowed Audio Coders Groups	Allowed Audio Coders Group ID Coder Name 1 : **G711A-Law** Coder Name 2 : **G711U-Law**
IP-to-IP Routing Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > SBC > IP-to-IP Routing	SIP Options rule Name : **SIP Options** Alternative Route Options: **Route Row** Source IP Group : **Any** Request Type : **OPTIONS** Destination Type : **Dest Address** Destination IP Group : **None** Destination SIP Interface : **None** Destination Address : **internal** Skype to BTIP rule Name : **Skype to BTIP** Alternative Route Options: **Route Row** Source IP Group : **Skype IP Group** Request Type : **All** Destination Type : **IP Group** Destination IP Group : **BTIP IP Group** Destination SIP Interface : **BTIP SIP Interface** BTIP to Skype rule

Menu	Value
	Name : **BTIP to Skype** Alternative Route Options: **Route Row** Source IP Group : **BTIP IP Group** Request Type : **All** Destination Type : **IP Group** Destination IP Group : **BTIP IP Group** Destination SIP Interface : **Skype SIP Interface**
Gateway for PSTN calls (Annex 1) Only for RS SBA and RS GW	
Trunk Group	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Gateway > Trunks & Groups > Trunk Groups	Configure Group Index Module : **PRI** From/To Trunk : **1** Channels : **1-31** Phone Number : **Phone number used for the Trunk** Trunk Group ID : **Trunk Group ID associated**
Trunk Group Settings	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Gateway > Trunks & Groups > Trunk Group Settings	Add Trunk Group Settings Name : **E1 PSTN** Trunk Group ID : **Trunk Group ID associated** Channel Selected Mode : **Cyclic Descending** Registration Mode : **Don't Register**
Trunk Settings	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Gateway > Trunks & Groups > Trunks	Protocol Type : **E1 EURO ISDN** Line Code : **HDB3** Framing Method : **Extend super Frame**
VoIP Network Configuration	
Media Realm Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > Media Realms	Can be the same as Skype Media Realm Name : **MRm for Skype** IPv4 Interface Name : **Mediant IPv4 Interface** Port Range Start : **16900** Number of Media Session Legs : **50** Port Range End : **Filled automatically** Default Media Realm : **Yes**
SRD Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > SRDs	Same as Skype SRD Table Name : **DefaultSRD**
SIP Interface Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > SIP Interfaces	SIP Interface Table Name : **SIPInterface_PSTN** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface for E1/Analog** Application Type : **GW** TCP Port : **5060**

Menu	Value
Proxy Set Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > Proxy Sets	Proxy Set Table for PSTN traffic Name : **ProxySet for PSTN Traffic** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface for E1/Analog** SBC IPv4 SIP Interface : **SIP Interface for PSTN Traffic** Proxy Load Balancing Method : **Round Robin** Proxy Keep-Alive Time : **60** Proxy Keep-Alive : **Using OPTIONS** (Proxy Address Table) 1 Entry : **FQDN or @IP of SBA:5060 TCP**
IP Group Table	
On the AudioCodes Mediant WebUi Interface: (Advanced mode) Configuration > VoIP > VoIP Network > IP Group Table	IP Group Table for Skype traffic Name : **IP Profile for PSTN Traffic** Type : **Server** Proxy Set : **Proxy Set for PSTN Traffic** IP Profile : **IP Profile for Skype Traffic** Media Realm : **Media Realm for Skype Traffic**
Routing	
General Parameters	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Gateway > Routing > Routing Settings	Enable Alt Routing Tel to IP : **Enable**
IP To Trunk Group Routing	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Gateway > Routing > IP To Tel	Skype To PSTN rule Name : **Skype To PSTN** Source IP Group : **Skype IP Group** Source SIP Interface : **PSTN SIP Interface** Trunk Group ID : **PSTN Trunk Group ID** Destination Type : **Trunk Group**
TEL To IP	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Gateway > Routing > TEL To IP	PSTN To Skype rule Name : **PSTN To Skype** Source Trunk Group ID : **PSTN Trunk Group ID** Destination IP Group : **Skype IP Group** SIP Interface : **PSTN SIP Interface** IP Profile : **Skype IP Profile**
Gateway for Analog calls (Annex 2)	
Trunk Group	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Gateway > Trunk Group	Configure Group Index Module : **FXS** Channels : **1** Phone Number : **Analog number in e164 format** Trunk Group ID : **Trunk Group ID for Analog**
Trunk Group Settings	
On the AudioCodes Mediant WebUi Interface:	Add Trunk Group Settings

Menu	Value
Setup > Signaling & Media > Gateway > Trunk Group Settings	Name : **Analog** Trunk Group ID : **Trunk Group ID for Analog** Channel Selected Mode : **By Dest Phone Number** Registration Mode : **Don’t Register**
Analog Settings	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Gateway > Analog Gateway > Analog Settings	Analog Metering Type : **12 Khz Sinusoidal bursts** FXS Coefficient Type : **Europe**
VoIP Network Configuration	
Media Realm Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > Media Realms	Can be the same as Skype Media Realm Name : **MRm for Skype** IPv4 Interface Name : **Mediant IPv4 Interface** Port Range Start : **16900** Number of Media Session Legs : **50** Port Range End : **Filled automatically** Default Media Realm : **Yes**
SRD Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > SRDs	Same as Skype SRD Table Name : **DefaultSRD**
SIP Interface Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > SIP Interfaces	SIP Interface Table Name : **SIPInterface_Analog** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface for E1/Analog** Application Type : **GW** TCP Port : **5060**
Proxy Set Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > Proxy Sets	Proxy Set Table for Analog traffic Name : **ProxySet for Analog Traffic** SRD : **DefaultSRD** Network Interface : **Mediant IPv4 Interface for E1/Analog** SBC IPv4 SIP Interface : **SIP Interface for Analog Traffic** Proxy Load Balancing Method : **Round Robin** Proxy Keep-Alive Time : **60** Proxy Keep-Alive : **Using OPTIONS** (Proxy Address Table) 1 Entries : **FQDN or @IP of SBA:5060 TCP**
IP Group Table	
On the AudioCodes Mediant WebUi Interface: Setup > Signaling & Media > Core Entities > IP Groups	IP Group Table for Skype traffic Name : **IP Profile for Analog Traffic** Type : **Server** Proxy Set : **Proxy Set for Analog Traffic** IP Profile : **IP Profile for Skype Traffic** Media Realm : **Media Realm for Skype Traffic**

Menu	Value
Manipulations	
IP To Trunk Group Routing	
On the AudioCodes Mediant WebUi Interface: (Advanced mode) Setup > Signaling & Media > Gateway > Manipulations > IP To Trunk Group Routing	Skype To Analog manipulation rule Name : **Skype To Analog** Source IP Group : **Skype IP Group** Destination Prefix : **Analog phone number**
TEL To IP	
On the AudioCodes Mediant WebUi Interface: (Advanced mode) Setup > Signaling & Media > Gateway > Manipulations > TEL To IP	Analog To Any manipulation rule Name : **Analog To Any** Source Trunk Group ID : **Analog Trunk Group ID** Destination IP Group : **Any** Prefix to Add : **+**
Routing	
IP To Trunk Group Routing	
On the AudioCodes Mediant WebUi Interface: (Advanced mode) Setup > Signaling & Media > Gateway > Routing > IP To Trunk Group Routing	Skype To Analog routing rule Name : **Skype To Analog** Source IP Group : **Skype IP Group** Source SIP Interface : **Analog SIP Interface** Destination Phone Prefix : **Analog number in e164** Destination Trunk Group : **Trunk Group** Trunk Group ID : **2**
TEL To IP	
On the AudioCodes Mediant WebUi Interface: (Advanced mode) Setup > Signaling & Media > Gateway > Routing > TEL To IP	Analog To Skype routing rule Name : **Analog To Skype** Source Trunk Group ID : **Analog Trunk Group ID** Destination IP Group : **Skype IP Group** SIP Interface : **Analog SIP Interface** IP Profile : **Skype IP Profile**

CAC Configuration Checklist

CAC Configuration	
Enable CAC	
SFB PowerShell On the Skype for Business PowerShell Interface: ✓ ***Set-CsNetworkConfiguration -EnableBandwidthPolicyCheck*** **SFB Control Panel** On the Skype for Business control panel interface: ✓ Network Configuration >Global	SFB PowerShell **EnableBandwidthPolicyCheck** parameter has to be set to **1** SFB Control Panel **Enable call admission control** parameter has to be **checked**
Media bypass configuration (In case of RS SBA and/or RS Default)	

Menu	Value
SFB PowerShell On the Skype for Business PowerShell Interface: ✓ ***$a= New-CsNetworkMediaBypassConfiguration -alwaysByPass $false -Enabled $false*** ✓ ***Set-CsNetworkConfiguration –MediaBypassSettings $a*** **SFB Control Panel** On the Skype for Business control panel interface: Network Configuration >Global	SFB PowerShell ✓ ***AlwaysByPass*** parameter has to be set to **false** ✓ ***Enable*** parameter has to be set to **false** SFB Control Panel ✓ **Enable media bypass** parameter must not be checked
Media bypass configuration (In case of RS GW or a mix of RS GW, RS SBA and RS Default)	
SFB PowerShell On the Skype for Business PowerShell Interface: ✓ ***$a= New-CsNetworkMediaBypassConfiguration -alwaysByPass $ false -Enabled $true*** ✓ ***Set-CsNetworkConfiguration –MediaBypassSettings $a*** **SFB Control Panel** On the Skype for Business control panel interface: ✓ Network Configuration >Global	SFB PowerShell ✓ ***AlwaysByPass*** parameter has to be set to **false** ✓ ***Enable*** parameter has to be set to **true** SFB Control Panel ✓ **Enable media bypass** parameter has to be **checked** ✓ **Choose "**Use sites and region configuration**"**
Media bypass Trunk Configuration (Only in case of RS-GW)	
SFB Control Panel On the Skype for Business Control panel interface ✓ Voice Routing > Trunk Configuration And then select the RS-GW Trunk to edit Trunk configuration	SFB Control Panel ✓ **Enable media bypass** parameter has to be **checked**
Trunk configuration (SFB PowerShell) On the Skype for Business PowerShell Interface: ✓ ***Set-CsTrunkConfiguration –Identity <Site> –RTCPActiveCalls $False*** ✓ ***Set-CsTrunkConfiguration –Identity <Site> –RTCPCallsOnHold $False***	**-Site:** The name of the site
Network Region	
SFB PowerShell On the Skype for Business PowerShell Interface: ✓ ***New-CsNetworkRegion –Identity <XdsIdentity> -CentralSite <Central_Site> –AudioAlternatePath $False -Description "All Locations"*** **SFB Control Panel** On the Skype for Business control panel interface: ✓ Network Configuration >Global	SFB PowerShell **-Identity:** The name of the network region **-Central site:** The name of the central site as defined on SFB topology builder SFB Control Panel **Identity:** The name of the network region **Central site:** The name of the central site as defined on SFB topology builder **Audio alternate path**: Recommended to disable
Bandwidth Policy profiles

Configuration requirements (warnings)	
Configuring Clients ports range for LPE and SoftPhone	
SFB PowerShell On the Skype for Business PowerShell Interface *Set-CsConferencingConfiguration* –***ClientMediaPortRangeEnabled*** *$true* –***ClientAudioPort*** *50060* **–*ClientAudioPortRange*** *48*	SFB PowerShell -**ClientMediaPortRangeEnable :** must be enabled in order to use the specific range -**ClientAudioPort :** corresponds to the first port used for audio -**ClientAudioPortRange :** corresponds to the audio range
Configuring Clients ports range for VVX	

Menu	Value
✓ Using VVX Web UI : - Navigate through the VVX Web Interface: http:<VVX_IP_Address> - Go to Settings tab > Network menu > RTP - Configure the Port Range Start to: 50060	VVX WebUI
✓ Using VVX configuration file (.cfg) - Configure the following line in the VVX configuration file : tcpIpApp.port.rtp.mediaPortRangeStart="50060" - Import the new configuration file to the VVX using the WebUI or through the IIS server	VVX WebUI or IIS Server
Others Devices	
✓ Check that the audio range port respect the OBS recommendations The default audio range is: 50060-50107.	

6 AudioCodes FAX configuration checklist

6.1 FXS fax on Mediant configuration

6.1.1 Telephony profile

The FXS ports with fax devices connected requires dedicated configuration for fax. To create TelProfile go to **SETUP** > **SIGNALING & MEDIA** > **CODERS & PROFILES** > **Tel Profiles.**

Create new profile by pressing + New and set:

Parameter	Value	Description
Name	**TelProfile_FXSFAX**	Profile name
Fax Signaling Method	*T.38 Relay*	Select T.38 protocol for fax transmission

6.1.2 FXS port configuration update

Go to **SETUP** > **SIGNALING & MEDIA** > **GATEWAY** > **Trunks & Groups** > **Trunk Groups**

Update TEL PROFILE NAME on chosen trunk group to **TelProfile_FXSFAX**

6.1.3 Update IP Profile

Go to **SETUP** > **SIGNALING & MEDIA** > **CODERS & PROFILES** > **IP Profiles.**

Select profile defined for Business Talk IP Group and update parameters:

Parameter	Value	Description
MEDIA SECURITY		
SBC Media Security Mode	**RTP**	Disable secured RTP to avoid TLS in SDP
Gateway Media Security Mode	**Disable**	Disable secured RTP to avoid TLS in SDP
GATEWAY FAX AND MODEM		
Fax Signaling Method	**T.38 Relay**	Use T38 for fax transmission

6.1.4 General fax parameters

Go to **SETUP** > **SIGNALING & MEDIA** > **MEDIA** > **Fax/Modem/CID Settings** and update:

Parameter	Value	Description
Fax Transport Mode	**T.38 Relay**	Use T38 for fax transmission
Fax Relay Redundancy Depth	1	Set pages transmission redundancy
Fax Relay Enhanced Redundancy Depth	4	Set fax negotiation redundancy

6.1.5 Routing

The routing of fax calls must be reconfigured to bypass SBA. Go to SETUP > SIGNALING & MEDIA > GATEWAY > Routing > Tel->IP Routing. Select line assigned to chosen FXS or create new one:

Parameter	Value	Description
Source Trunk Group IP	*<trunkID>*	Trunk ID for selected FXS port
Destination IP Group	*<BT IP Group>*	IP Group for Business Talk aSBC
SIP Interface	*<SIP Interface>*	SIP Interface for Business Talk aSBC access

Go to SETUP > SIGNALING & MEDIA > GATEWAY > Routing > IP->Tel Routing. Create new entry:

Parameter	Value	Description
Source SIP Interface	*<SIP Interface>*	SIP Interface for Business Talk aSBC access
Destination Phone Pattern	*<FAX DID>*	Set FAX DID accessed by BT
Destination Type	Trunk Group	
Trunk Group ID	*<Trunk Group IP>*	Trunk ID for selected FXS port
Source IP Group	*<BT IP Group>*	IP Group for Business Talk aSBC

Go to SETUP > SIGNALING & MEDIA > SBC > Routing > IP-to-IP Routing. Create new entry:

Parameter	Value	Description
Source IP Group	*<BT IP Group>*	IP Group for Business Talk aSBC
Destination Username Pattern	*<FAX DID>*	Set FAX DID accessed by BT
Destination Type	Gateway	

When created please move new entry before default Business Talk route.

6.1.6 V34-fax-transport-type

The next, V34FaxTransportType parameter can be set only using CLI/configuration file and is not visible in web application. To set this parameter go to dedicated configuration page: https://<MediantIP>/AdminPage (note: subpage address is case sensitive).

Go to “ini Parameters” subsite using left sided menu.

Parameter name: V34FAXTRANSPORTTYPE
Enter value: 1

Click “Apply New Value”.

If parameter is set correctly you should see output:

```
Parameter Name: V34FAXTRANSPORTTYPE
Parameter New Value: 1
Parameter Description:Determines the V.34 fax transport method.
```

6.1.7 Analog device on Skype

There is no need to define analog device on Skype since signalization goes directly between Mediant and Business Talk.

6.2 FXS fax on MediaPack cascaded behind Mediant

The fax integration on MediaPack with Business Talk through Mediant is based on assumption that fax calls are not sent to SBA. In such scenario Mediant gateway only mediates in communication.

6.2.1 MediaPack configuration

The MediaPack gateway must be first integrated directly with Mediant. The MediaPack endpoints are registered to Mediant using SIP REGISTER

6.2.1.1 Telephony Profile

The telephony profile assigned to FXS port must be updated to enable T.38 protocol. Go to **VoIP -> Coders and Profiles -> Tel Profile Settings.** Select appropriate profile (or create new one) and update **Fax Signaling Method** to **T.38 Relay:**

> **Note**: Assigned Tel Profile can be checked under **VoIP -> GW and IP to IP -> Hunt Group -> Endpoint Phone Number**

6.2.1.2 Configure fax transmission parameters

Go to **VoIP -> Media -> Fax/Modem/CID Settings** and set following parameters:

Parameter	Value	Description
Fax Transport Mode	**T.38 Relay**	Enable T.38
V.34 Modem Transport Type	**Disable**	Disable V.34 signals (block SG3 fax)
Fax Relay Redundancy Depth	1	Redundancy of transmitting pages
Fax Relay Enhanced Redundancy Depth	4	Redundancy of fax signalization

6.2.2 Mediant configuration

Configuration starts from integration with MediaPack.

6.2.2.1 IP to IP Routing

Click **New** to create routing for outgoing fax calls from MediaPack to BT/BTIP

Parameter	Value	Description
General > Name	MediaPack_AD_to_BT	
Match > Source IP Group	IPG_MediaPack_AD	
Match > Request Type	All	
Action > Destination Type	IP Group	
Action > Destination IP Group	*<BT IP Group>*	IP Group for Business Talk aSBC
Action > Destination SIP Interface	*<SIP Interface>*	SIP Interface for Business Talk aSBC access

Click **New** to create routing for incoming fax calls from BT/BTIP to MediaPack

Parameter	Value	Description
General > Name	BT_to_MediaPack_AD	
Match > Source IP Group	*<BT IP Group>*	
Match > Request Type	All	
Match > Destination Username	*<Fax phone number>*	
Action > Destination Type	All Users	

Note: place these rules before default entry forwarding calls to Skype

Also, calls must be routed directly:

- From IP Group defined for calls from MediaPack towards Business Talk
- From IP Group defined for calls from Business Talk towards “All Users” destination (if MediaPack is configured to register FXSW ports on Mediant)

7 Skype for Business Online – AudioCodes Cloud Connector Edition configuration checklist

7.1 Generic configuration

Menu	Value
TCP Mediation Server	
The TCP Mediation Server must be 5068: On the PowerShell interface execute the following command: **Set-CSMediationServer** -Identity *<MediationServer:MS-FQDN>* -SipClientTcpPort *<5068>*	Identity: must match corresponding **mediation server FQDN** SipClientTcpPort: must be set to **5068**
PSTN Gateway	
During Cloud Connector Edition Trunk must be created for SBC	SIP Transport protocol: **TCP** Mediation Server port: **5068**
O365 Cloud Connector Edition	
Register Check Open an online session on the PowerShell, then execute: Get-CsTenantFederationConfiguration	SharedSipAddressSpace: must be set to **$true**
Open an online session on the PowerShell, then execute: Get-CsTenantHybridConfiguration	UseOnPremiseDialPlan: must be set to **$false**
CCE admin account association Open an online session on the PowerShell, then execute: Set-CsHybridMediationServer -Id *<UserName>* -FQDN *<MSFQDN>* -AccessProxyExternalFqdn *<EdgeExternationFQDN>*	ID: must be filled with **CCE admin account SIP address** FQDN: must be filled with the associated **Mediation Server FQDN** AccessProxyExternalFqdn: must be filled with the **Edge Server External access FQDN**
User Management	
User creation in O365 Active Directory Connect to O365 tenant and create a new user.	DNS: must be the **customer DNS** 'Not the xxx.onmicrosoft.com default domain' User country: must be filled 'important for dial plan usage' Assign appropriate License**:** Plan E3 with CloudPBX add-on option Or Plan E5 'CloudPBX included by default'
Policies assignment and phone number attribution to User Open an online session on the PowerShell, then execute: Set-CsUser -Identity *<UserName>* -EnterpriseVoiceEnabled *$true* -HostedVoiceMail *$true* -OnPremLineURI *<tel:+PhoneNumber>*	Identity: **User name** EnterpriseVoiceEnabled: **$true** HostedVoiceMail: **$true** OnPremLineUri: **tel:+E164 format number**
User Association to appropriate Cloud Connector Edition Open an online session on the PowerShell, then execute: Set-CsUserPstnSettings -Id *<UserName>* -HybridPSTNSite *<PSTNSiteName>*	Id: **User name** HybridPSTNSite: **appropriate CCE where the user will be associated**

7.2 Standalone specific configuration

Menu	Value
Cloud Connector Edition Wizard (version 2.1.0.22)	
CCE General Information (step) During wizard installation ensure that CCE is deployed on standalone mode	Installation Type: **Standalone CCE or First CCE in HA** Site Directory: path to shared directory where CCE files will be stored User: **Skype for Business Online admin user name** Password: Skype for Business Online admin password
CCE Gateway configuration (step) During the CCE gateway configuration, following mediation server options must be configured	EnableReferSupport: **False** EnableFastFailoverTimer: **False** ForwardPAI: **False** ForwardCallHistory: **True**
Mediation Server "Manual configuration" Following mediation server parameters must be configured manually through PowerShell Online Interface In addition to above configured parameters To configure the mediation server trunk with VISIT SIP parameters: - Logon the mediation server using the CCE domain - Open PS console and execute the following cmdlet Set-CsTrunkconfiguration -RTCPActiveCalls *$false* -RTCPCallsOnHold *$false* -SRTPMode *Optional*	RTCPActiveCalls: $**False** RTCPCallsOnHold: $**False** SRTPMode: **Optional** **WARNING:** The manual configuration will be lost after each CCE update.
AudioCodes SBC Configuration Wizard (wizard version min 2.20)	
Product (Step 1 of 7) Choose product type and version:	Product: **Mediant 800, 1000 or software** depending on the Gateway type used for the deployment Version: **7.2** Use defaults from template must be **checked** End Customer: **corresponds to customer name ex: "OBS"** Country: **corresponds to customer country ex: "France"** Integrator: **if needed corresponds to integrator name ex: "OBS"** Installer: **if needed corresponds to installer name ex: "OBS"**
