

1.1 3G Access Method

3G access enables remote sites to be connected to Business VPN in a resilient access mode with our Air Backup option that provides a wireless last mile diversity over General Packet Radio Service (GPRS), Enhanced Data Rates for GPRS Evolution (EDGE), Universal Mobile Telecommunications System (UMTS), High Speed Downlink Packet Access (HSDPA) or High Speed Uplink Packet Access (HSUPA) networks, depending on mobile carrier's capability at the Customer location. It is available for Business VPN Small and Business VPN Corporate.

3G access also enables remote sites to be connected to Business VPN through our rapidly deployable ("ready-to-use"), temporary Air Quick-Start Service if Customer cannot wait for the delivery of the permanent access connection.
