**Industry 4.0:
Innovation meets cyber risk**

The convergence of IT and OT is unlocking new levels of industrial efficiency — but also exposing critical infrastructure to unprecedented cyber threats.

Industry 4.0 is driving the digital transformation of industrial operations, unlocking new efficiencies and business value through the convergence of IT and OT. This evolution requires previously isolated systems to connect with IT and cloud environments — increasing performance demands but also widening the attack surface. With the integration of IIoT devices and adoption of standard IT technologies in OT, known vulnerabilities are now entering critical environments.

To address these challenges, Orange Business and Cisco combine industrial networking, OT security expertise, and real-time threat intelligence into a comprehensive, integrated security solution. At the heart of this collaboration is Cisco Cyber Vision, enhanced by Orange Business's managed services and visibility capabilities — helping organizations secure their digital transformation while staying resilient and future-ready.

Industry 4.0 is driving the digital transformation of industrial operations, unlocking new efficiencies and business value through the convergence of IT and OT.

A comprehensive solution for OT security

Orange Business and Cisco offer an end-to-end solution to secure the digital transformation of your production environment. By combining Cisco Cyber Vision with Orange Business's Managed Detect & Respond capabilities, we deliver the security and reliability you need to stay focused on what matters most: optimizing your production.

Key benefits

 Full OT Visibility	 End-to-End Protection	 Automated Network Segmentation
<p>Gain deep insights into connected assets and their behavior through Cyber Vision, enhanced by Orange Business's data visualization tools.</p>	<p>Integrated technologies and threat intelligence provide segmentation, threat detection, and rapid incident response.</p>	<p>Minimize the attack surface with Firewalls and ISE-driven micro-segmentation.</p>
 Real-Time Threat Detection	 Operational Efficiency	 Future-Ready Security
<p>Benefit from continuous monitoring and early detection of suspicious activity.</p>	<p>Accelerate troubleshooting, reduce downtime, and improve overall performance.</p>	<p>Support secure adoption of Industry 4.0 use cases like predictive maintenance and asset tracking.</p>

The right solution for every stakeholder

 CISOs & Executives	 OT & IT Teams	 C-Level Leaders
<p>Reduce business risk, improve resilience, and meet compliance requirements.</p>	<p>Simplify security management and gain actionable insights into industrial traffic.</p>	<p>Secure critical operations while enabling innovation and digital growth.</p>

A joint partnership for future-proof expertise

Orange Business is your trusted global partner in cybersecurity and digital infrastructure. We provide end-to-end protection and resilience for industrial operations, from secure connectivity and threat intelligence to 24/7 monitoring and incident response.

Cisco is a leader in industrial networking and cybersecurity. **Cisco Cyber Vision** delivers in-depth visibility, threat detection, and seamless integration into industrial environments.

Together, we offer a powerful approach to securing your OT environment — **combining visibility, protection, and operational continuity.**

Ready to secure your OT environment?

Take the next step toward a resilient, future-proof industrial security strategy.
