

# Flexible Computing Premium

**86%**

of CIOs state that cloud computing solutions will become “a must” for enterprise IT in the coming years.

Source: Portio Research, April 2010

## “a la carte” computing

- Flexible Computing Premium is an infrastructure-as-a-service solution.
- It will accommodate all your IT projects:
  - multiple applications in differing environments, accessible from your private network or the Internet
  - critical applications that require extensive management
- You benefit from a secure, highly available, efficient infrastructure.

**Business  
Services**

## focus on your core business by simplifying your technology

- You build your IT “a la carte” with our extremely modular infrastructure and management levels.
- Your infrastructure can be modified quickly and easily to meet your changing needs (e.g., new services, peak activity, etc.).
- You keep control over your IT while our experts provide support and manage load increases.

## depend on highly-secure, always-on IT

- Our expertise and processes guarantee that your applications and data are highly protected in our data centers: certifications (SAS 70 Audit, ISO 27000, ISO 9000), redundant data centers, firewalls, regular back-ups, etc.
- We guarantee that your IT infrastructure will remain available 24x7, and we commit to strict service level agreements.
- Our disaster recovery plan ensures that your business is up and running quickly after any major incidents and that your applications and data stay secure.

## our professional services team will help

- Your dedicated customer service manager supports you throughout the lifecycle of your solution, from deployment to ongoing management, and continues to help with each change to your infrastructure.
- Administration of your infrastructure is simple: from personalized reporting to load increases, your administration portal can be completely customized to your preferences.
- You keep control over your budget: transform CAPEX expenses into predictable operational costs, optimize the use of your internal resources and rationalize the cost of your IT teams.

## good to know

With Flexible Computing Premium, you combine performance for your IT infrastructure with environmental benefits: reducing the number of servers reduces energy consumption.

According to Gartner\*, server virtualization can generate between 15-30% cost reduction (time, technology and server management).

\*Comparing cloud computing and infrastructure utility, Gartner, May 2009
