Power in partnering: InfoVista

“ InfoVista solutions are fully integrated with Orange Business VPN and help enterprises maximize the value of their application investment through a unique solution providing visibility, control and optimization over hybrid networks. ”

Vikas Trehan
Senior Vice President, Global Channels
InfoVista

“ We are entering a new era of collaboration with InfoVista, where hybrid networking and application proliferation are the key customer issues that we are addressing. By innovating together, we can meet our customers' need for a high-performing link between their users and their applications for business efficiency. ”

Jacques Tardieux
Network Solutions
Orange Business Services

A new way to guarantee application performance

As the volume of applications increases, getting accurate data on network congestion and performance degradation is vital for smart capacity planning and transformation to hybrid networks. With InfoVista, we integrate solutions that provide bandwidth control, protect business continuity, support traffic growth and manage IT complexity, while reducing costs and improving end-user satisfaction.

- 10+ years of joint innovation delivering application performance control and guaranteed solutions to global enterprises
- One point of contact for the technology and the service, as well as all aspects of operational support
- Strategic Partner of the Year 2015 (Ipanema, now part of InfoVista)

Orchestrating network performance

Support your business productivity

By integrating InfoVista's global solutions, we enable our customers to guarantee ERP, CRM and business application performance for everyone and manage IT transformation to the cloud and unified communications, regardless of the number of sites, users or applications.

IT expenses are reduced – with no hardware investments, no bandwidth costs at the gateway and no MPLS costs for Internet traffic – even in the face of exploding network traffic.

The CIO challenge: guarantee application performance with a limited budget

Network Boost

With Network Boost, your network resources are optimized while your business applications are protected and available 99.9% of the time.

- Full visibility: access real-time reporting of application behavioral trends, as well as dynamic management of data flows
- Hybrid network guarantee: prioritize critical ERP, CRM and UC applications against bandwidth-hungry recreational traffic, incorporating local Internet breakout
- Business continuity and SLAs: increase flexibility and continuity by activating the standby link for off-load traffic
- Accelerated exchanges: improve quality of service with data compression and acceleration of traffic flows

Application Visibility

This new option for Orange Business VPN uses scalable InfoVista flow monitoring technology to provide comprehensive application analysis. Customers can monitor usage and performance across the network and drill down to detailed metrics.

Gartner Magic Quadrant 2016 Strengths: "InfoVista's strategy is to focus on and deliver increased scale to meet the demands of the carrier networks and large enterprises... Extensibility of the InfoVista solution allows it to meet sophisticated use cases that many other vendors cannot meet."

InfoVista is considered visionary in the Gartner Magic Quadrant for WOC Controllers (2011-2015), and Orange leads for Network Services, Global (2016).

Success stories

GSF

"With Network Boost, we automatically use all the network resources available. We can now protect our business application performance anytime, anywhere. The support delivered by Orange Business Services and Ipanema Technologies (now part of InfoVista) was and remains highly professional and demonstrates unparalleled responsiveness."

Matthieu Desson

Head of Systems and Networks
GSF

Cirque du Soleil

Cirque du Soleil selected Network Boost to optimize and accelerate its customer-facing network applications. Network Boost prioritizes the company's sales operations, making it easier for customers to book tickets and buy concessions. Network Boost provides full visibility of how the network is being used – by application, site and user group, including Cirque du Soleil's traveling and permanent shows, as well as its corporate offices.
